| Table | 106. | Number of students attending training colleges for teachers: 1959/60 = 1964/65                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |            | 124   |

#### EXPLANATORY NOTES

#### SCHOOL YEAR:

That of the Government Primary Schools covers the ten months from September 15 to the following July 15; that of Grammar, Secondary/Technical and Technical Schools starts two weeks later and ends on or about July 15. For brevity's sake, the school year in this report is indicated by the year in which it ends e.g., the school year 1965 refers to the school year extending from September/October 1964 to July, 1965.

#### **ENROLMENT**:

This is a count of all pupils whose names appear in a school register on June 30th of the school year. The count is net of the pupils who have died, withdrawn or transferred to another register during the same school year. In the case of the university and polytechnic the count relates to the start of the academic year in October.

#### SCHOOL:

A school (educational institution) is a group of pupils (students) of one or more grades organized to receive instruction of a given type and level under one teacher, or under more than one teacher, and with an immediate head. More than one school may be housed in one school plant, e.g., at Msida and Hamrun. The school may be either public or private. A public or Government school is administered by the Department of Education, a private school is operated by a proprietor or voluntary body.

#### GRADE:

This is a "stage" or "standard" of instruction usually covered in the course of a school year. It is a unit in the vertical organization of a school

#### CLASS:

A class is a group of pupils (students) who are usually instructed during a school year by a teacher or by several teachers. It is a unit in the horizontal organization of a school.

# PUPIL:

A pupil (student) is a person enrolled in a school for systematic instruction at any level of education.

#### TEACHERS:

A teacher is a person directly engaged in instructing a group of pupils (students). Most teachers are on a full-time basis, but there are also teachers at the second level, known as visiting teachers, who are part-timers. Personnel who have no regular teaching functions, such as headteachers, principals and school assistants, do not count as teachers.

#### COMPULSORY EDUCATION:

The Compulsory Education Actives introduced in 1946. It provides for the compulsory full-time schooling of children from the age of 6 to 14 years.

#### COMMENTARY

# PART 1 - ORGANIZATION, LEVELS AND FINANCE OF EDUCATION

The statistics collected in this annual publication relate to educational institutions and, to a much smaller extent, to educational finance. They were collected from postal questionnaires addressed to all public and private educational establishments. Heads of these establishments furnished a complete return concerning the 1964/65 school year referred to in this publication as the 1965 school year. The returns were vetted and coded and then processed mechanically by punchcard equipment installed in the Central Office of Statistics.

# Organization of the School System:

The school system in Malta and Gozo resembles that prevailing in many Nursery school (pre-primary) is followed by primary school (duration of course 6 to 8 years). Pupils may leave the primary school after 6 years and sit an examination for admission to a Grammar or Secondary Technical Again, after 5 years of secondary education, pupils sit the General Certificate of Education (University of Oxford) or equivalent examinations, and may elect to go to a higher education (teacher training college, polytechnic or University) if qualified. Alternatively they may apt either to discontinue their schooling and enter the labour market, or to continue the sixth class, or else complete a "sixth form" of two years leading to an examination in one or more advanced level subjects at the G.C.E. examinations. There are also technical schools (vocational) catering for pupils who spent 7 or 8 years in the There is an everlap of at least 2 years between the primary and the secondary levels since the primary course extends to 8 years and secondary education begins after 6 or 7 years of primary schooling. There is also an element of overlap between secondary education and higher (non-University) education, and between technical education and primary schooling.

#### Educational Levels:

A classification of schools by educational level for international comparisons is useful though difficult to achieve. An attempt is made in this commentary to distinguish education by level without foregoing the classification by type of school familiar to the local educationist.

#### Pre first level education:

Known as nursery education, this is provided for children aged 3 to 5 years before they are admitted to the regular primary schools. It is more concerned with the healthy development of the child, mentally and socially, than with the acquisition of specific skills such as reading, writing and arithmetic. In the 1965 school year 2,776 or 12.8 per cent. of the child population aged 3 - 5 years were enrolled at this educational level in nursery schools or nursery classes attached to schools. As in some countries, nursery education is provided only by private schools.

#### First level education:

This is the basic level of education provided in all countries. More than half the countries in the world have now compulsory laws which are carried out fully or in part. In Malta, compulsory education laws were enacted in 1946. This level of education is obtained without payment in government primary schools, and on direct payment of fees when parents send their children to a private school.

Education at this level is concerned with the child's acquisition of the tools of learning – the three R's – together with an elementary knowledge of history, geography and religious knowledge apart from English, Maltese and Italian or French. It is imparted to children aged 6 to 14 years in government primary schools and to children aged 5 to 12 in primary classes attached to private schools. Enrolment at this level totalled 55,364 which is 85.2 per cent of the population aged 6-14 years. There are indications that this enrolment is on a diminishing trend. Last year there were 57,192 children enrolled, and 59,557 in 1963. The average decline over the past five years has been at the rate of 1,570 every year.

#### Second level education:

Built upon the basic instructions given at the first level, second level education provides for the various needs of the adolescent in preparation for his active and intelligent participation in the life of the community. It normally begins after 6 to 7 years of previous instruction in a government school or in primary classes attached to a private school. The age of pupils receiving this education is normally 12 to 17 years and a few continue beyond 17 years in what is commonly known as the sixth form. In 1965, 24.7 per cent. or 11,084 of the population in this age group were enrolled at this level in government schools, secondary classes attached to private schools, and in government secondary technical schools. Enrolment at this level has been increasing in recent years. The rate of increase over the past six years has

been about 650 a year. However, the increase over last year amounted to 44 students only. Some second-level education is also imparted in various departments of the Polytechnic, where some students are prepared for City and Guilds and similar examinations.

Second level education is general in a sense that it does not aim at preparing the pupils "directly" for a given trade or occupation. Where appropriate, our schools impart instruction with orientation of pupils according to interests and aptitudes. They prepare pupils for the General Certificate of Education examinations of Oxford or London Universities, as well as for Malta University matriculation examinations. They may, or may not, lead on to higher education at the third level.

#### Vocational education:

Secondary technical schools provide general and vocational education. and prepare their pupils to pass on to schools at the third level. been included under second level elucation. Technical schools, on the other hand, provide vocational education and are based on at least 6 years of first level education. They are "terminal schools"; that is, they do not prepare their pupils to pass on to the third level, or they enable such further education only to a very limited extent. Usually, they prepare pupils for certain Industrial training centres, too, provide vocational trades or occupations. education but at a lower level. They enable students to acquire manual or mechanical skills connected with certain occupations, whereas technical schools emphasize a certain degree of technical and scientific knowledge of the trade or Enrolment in technical schools and industrial training centres was This represents 2.1 per cent. of the population aged 14 - 23 1,346 in 1965. years.

#### Third level education:

This is provided by one University, one College of Arts, Science and Technology, and two Teacher Training Colleges. Students are required to have certain qualifications which, indirectly, imply completion of second level education before they are allowed admission to third level. Enrolment at this level in 1965 was 987 or 1.7 per cent. of the population aged 16 to 24 years. While entry to the two teacher training colleges, one for men and the other for women, depends on available accommodation and hence does not vary much from year to year, the intake of the Polytechnic, a new institution, is on the increase while that of the University depends on the availability of adequately qualified applicants and hence tends to fluctuate.

Expenditure on the running of public schools in the 1964/65 financial year amounted to nearly £2.3 million, whereof £1.59 million were for personal emoluments, £611,730 for other recurrent charges, and £66,170 as non-recurrent charges. The annual cost per pupil in the public schools worked out to £25 in primary schools, £54 in grammar schools and £70 in technical schools. These average costs fluctuate from year to year but they have generally been on a slowly declining trend since 1961/62.

Viewed from another angle, public expenditure, including capital expenditure, on education in the 1964/65 financial year amounted to £2.7 million which was equivalent to 6 per cent. of the national income generated in 1964. Capital expenditure amounted to 19 per cent. of the total.

#### PART 2 - COMPARATIVE SCHOOL ENROLMENT

The "total school enrotment ratio" ray be used as a crude indicator of a country's educational achievement. This indicator resolves itself into two components: (a) "primary school enrolment ratio" - enrolment in all primary schools as percentage of the population aged 5-14 years, and (b) "secondary school enrolment ratio" - enrolment in secondary schools as percentage of the population aged 15-19 years. It is on this basis that international comparisons are made though it should be made clear that the indicators and the comparisons are subject to serious limitations.

Total enrolment at the primary and secondary levels of education, 63 per cent in Malta and Gozo in 1965, marks creditable achievement in the educational field when it is considered that the larger ratios in more developed countries stem partly from much older compulsory education laws. The ratio obscures the position of the secondary level. Whereas the primary ratio of 78 per cent, is satisfactory, the secondary ratio of 34 per cent, has lagged behind that of most European and other countries in a similar stage of development as our own. However, the two ratios compare favourably with those of the world population as a whole which have been estimated rather crudely as 38 and 27 per cent, respectively.

These ratios fall short of a good yardstick of comparison when applied to territories at different stages of development. Account has to be taken also of the criticism that the standard age-groups may be unrealistic for a number of countries. In Malta, for instance, the correct age-grouping is 6-14 years for the primary level so that comparison of Malta's enrolment at this level of 78 per cent. With the corresponding figure of 53 per cent for England and Wales is entirely misleading as the relevant age-group for the last mentioned countries is 5-11 years.

A different indicator of educational achievement is that of an appropriate intake ratio based upon the population "at risk". The primary intake ratio - enrolment in the first year of Primary (Stage I) as a percentage of the total population aged 5 and 6 - was 56.7 per cent. Entry into the primary level is normally at ages 4 and 5 in private schools and at ages 6 and 7 in government schools. Compulsory attendance at school starts at age 6. The secondary intake ratio - calculated from the enrolment in the first year of secondary level as a percentage of the number enrolled the previous year in Grades IV, V and VI of the primary level - was 25 per cent. in the same year. Entry into the secondary level is by examination and is restricted to candidates in the age-group 10 to 14 years, as far as government secondary schools, imparting a general education, are concerned.

Entry into the third level remains very restricted, although in recent years, the availability of both government and private scholarships have produced a slight improvement. Of the total school population of 70.7 thousand, 81.2 per cent were in the primary, 17.5 per cent. at the secondary and only 1.3 per cent. were at the third level. The corresponding figures for the world as a whole stand at approximately 360 million, 76 per cent., 21 per cent.and 3 per cent. respectively.

# PART 3 - GOVERNMENT PRIMARY SCHOOLS

#### Enrolment:

The net pupil enrolment at each grade and at all grades combined from 1960 to 1965 is given in Table 3.1. This includes all pupils whose names appeared in a school register on June 30th of each school year, and is "net" in that it excludes pupils who died, withdrew or transferred to another register during the school year. Net enrolment for all grades taken together diminished consistently from 54,446 in 1959 to 45,470 in 1965. Within the grades there were differences in trend. Enrolment declined almost continuously in Stage II, Standard II, III and IV; fluctuated in Stage I and Standard I; in Standard V it started declining after 1961; in Standard VI decline set in only in 1963 while in Standard VII enrolment fluctuates but shows a tendency to increase. Only Standard I showed a small increase in 1965, the other grades all showing a decrease.

Various factors have influenced the trend of total net enrolment. The "bulge" in the age pyramid of the population created by the numerous births of 1944-50 advanced up the age scale and was replaced by smaller generations. The survivors of the "bulge" were 15 to 21 years in 1965 which implies that the "passing" of the "bulge" is now complete as far as the primary schools are concerned.

Table 3.1.

Hence the continuing decline in primary school enrolment has to be attributed to various other factors. The compulsory school-age population reckoned as that aged 6 to 14 years on the 30th June - has been declining at the rate of some 1,600 every year over the last six years. Some 1,000 more leave primary school every year, during the course of the school-year, in order to In 1965, the number of pupils emigrating was emigrate with their parents. An average of 2,800 pupils a year (2,591 in 1965) are exempted from further schooling because they attain age 14 without having completed course or because their absence from home will cause hardship to their parents. increasingly important cause of decline in the primary school population, especially that in the higher standards, is the admission of pupils from the government primary schools into secondary, technical or private schools the figures for 1965 being 1,616; 298 and 641 respectively.

#### Attendance:

In the 1965 school year government primary schools went through 334 sessions. These were either morning or afternoon sessions. Of these sessions, the boys missed an average number of 25.5 during the year while the average for the girls stood at 27.5. At almost all grades, attendance rates of boys were fractionally better than those of girls. In Stage I the absence rate was high due to the difficulties of the settling in period for young school entrants. From Standard II the two sets of attendance rates tended to decline with rising grade. As the grade gets higher, so does the age of the child, and this may involve increased liability to meet family commitments and keep away from school, especially in the villages. These family commitments devolve more heavily on girls who, besides, may suffer from greater susceptibility to sickness with the

onset of puberty. In standard IV there was a temporary reversal of the rising trend in absenteism. This may be attributed to the prospect of sitting the first public examination, namely the secondary and grammar school entrance examination.

# Class size and Pupil/Teacher ratio:

Since in the government primary schools a class holds together for the duration of the school year, permanently under the charge of one teacher, the pupil/teacher ratio becomes analogous to class size. The size of the average class has been falling for some years. It was 26.5 in 1959, 24.8 in 1961, 23.9 in 1963, 23.3 in 1964 and in 1965 it fell to 22.6. Two factors have been at the falling compulsory school-age population and the lag in adjustment of the number of teachers in service. In 1963 the number of teachers increased from 2,068 to 2,074 went back to 2,063 in 1964 and then fell to 2,005 in 1965. It is seen that in recent years, the number of teachers had tended to fluctuate mainly because of difficulty in predicting the number leaving the service during the year and the undesirability of adjusting the inflow of new teachers to match the outflow with its irregularities. On the whole, however, the number of teachers has tended to decline keeping more or less in step with the falling school population.

The average sizes of classes in nearly all grades diminished between 1964 and 1965. The average size of class for each respective grade is largely determined as a matter of policy. At present, the size of class falls sharply after Standard IV so that the average number of pupils per class in Standard VII is less than half that in Stage I.

Analysed by grade or standard, the average size of class generally becomes smaller with rising grade. What the optimum size of class in a primary school should be is a question of interest to the educational administration. Many countries have in their educational laws and regulations certain stipulations regarding the maximum size of classes, but practice is often at variance with these provisions. There are no such provisions in Malta, and the actual figure is smaller than that in most countries. For example, in England and Wales average class size often exceeds 40; in Australia the most usual size of class is between 40 and 45; in the United States the medium class size is The increasing need for educational services should, everybetween 30 and 32. where be reconciled with the need for economy and the use of resources, human or otherwise, so that educational services are rendered where they are needed and in the kind and quality needed, at the lowest possible costs.

Hence the continuing decline in primary school enrolment has to be attributed to various other factors. The compulsory school-age population reckoned as that aged 6 to 14 years on the 30th June - has been declining at the rate of some 1,600 every year over the last six years. Some 1,000 more leave primary school every year, during the course of the school-year, in order to emigrate with their parents. In 1965, the number of pupils emigrating was An average of 2,800 pupils a year (2,591 in 1965) are exempted from further schooling because they attain age 14 without having completed course or because their absence from home will cause hardship to their parents. increasingly important cause of decline in the primary school population, especially that in the higher standards, is the admission of pupils from the government primary schools into secondary, technical or private schools the figures for 1965 being 1,616; 298 and 641 respectively.

#### Attendance:

In the 1965 school year government primary schools went through 334 sessions. These were either morning or afternoon sessions. Of these sessions, the boys missed an average number of 25.5 during the year while the average for the girls stood at 27.5. At almost all grades, attendance rates of boys were fractionally better than those of girls. In Stage I the absence rate was high due to the difficulties of the settling in period for young school entrants. From Standard II the two sets of attendance rates tended to decline with rising grade. As the grade gets higher, so does the age of the child, and this may involve increased liability to meet family commitments and keep away from school, especially in the villages. These family commitments devolve more heavily on girls who, besides, may suffer from greater susceptibility to sickness with the

# Teachers and other personnel:

In the last five years, the number of headteachers has been about twice the number of school assistants but during 1965 there was a reduction of 2 in the number of headteachers and an increase in the number of school assistants bringing the number of headteachers to 100 and that of school assistants to 70.

In the last few years, school assistants formerly in charge of schools were being replaced by headteachers and it appears that some headteachers are being given the services of a school assistant as the increase in the number of the latter is mainly among those not in charge of a school.

Of particular interest in current educational statistics is the number of teachers in service who have direct control of a class. These may be either on a permanent or a temporary basis. The number of permanent teachers increased from 1,326 to 1,430 during 1964 and went up again to 1,493 in 1965. The temporary teachers decreased from 748 to 638 during 1964 and fell further to 512 in 1965. Some temporary teachers leave the service for other employment, others enter the training college or are appointed on a permanent basis after a short course. They are mainly replaced by graduates of the training colleges so that while the number of permanent teachers tends to increase, that of temporary teachers tends to fall.

The weekly working time of these teachers is  $27\frac{1}{2}$  hours in the winter months and  $18\frac{3}{4}$  hours in the two weeks preceding and the six weeks following the winter months.

#### Schools:

Recent trends indicate a reduction in mixed schools and dispersion of pupils into schools which cater for boys only, infants only, or girls and infants together. Seven years ago there were 108 schools; in 1965 there were 113.

Analysed by size, the typical school had a population ranging from 200 to 599 pupils. Small schools housing less than 200 pupils numbered 15; large schools with a population of 800 pupils and more were very few - 3 in 1963.

# Teaching of Italian and French:

The teaching of either of these languages was introduced in the 1963 school year. Pupils in Standard IV and higher standards could opt to be taught either Italian or French or neither of these languages in addition to English

and Maltese. In Standard IV, 89 per cent. of the pupils went in for one of the languages, most of them for Italian. In Standards V and VI, the proportions were 91 per cent. and 81 per cent. respectively. The proportion in Standard VII, nearly 100.0 per cent., is less reliable because it is based on small numbers and it probably does not relate to net enrolment. For both sexes, Italian was far more popular than French, and French was generally more to the liking of girls than of boys. The ratio of those taking Italian to French was as 16 to 1.

#### Free Nourishments:

The School Wealth Service distributed free nourishment to 88 per cent. of pupils enrolled in government primary schools in 1965. The nourishment consisted either of milk only, or a combination of milk and cod liver oil, or vitamin tablets.

Pupils in Malta were greater beneficiaries than their counterparts in Gozo (89.7 per cent. of pupils in Malta received nourishments, in Gozo the proportion was 75.2 per cent.). Much of the disparity in the proportion is found in the smaller consumption of milk and vitamin tablets in Gozo. Girls availed themselves more of this welfare service both in Malta and in Gozo.

# PART 4 - GOVERNMENT SECONDARY AND TECHNICAL SCHOOLS

#### Enrolment:

The number of pupils enrolled in these schools taken together has more than doubled in the last seven years. It went up from 3,540 in 1959 to 7,470 in 1965. This substantial increase was made possible by utilizing the excess housing capacity of existing school plants, most of them newly built, and by the addition of one secondary technical school for girls in 1959. Most of the increase has been concentrated in technical aducation which has become exceedingly prominent in recent years as a result of the national drive towards industrial diversification of the private sector of the economy necessitating a wider diffusion of technological knowledge. In 1959 there were twice as many students in secondary grammar schools run by government as in technical schools. In 1965 the figures were nearly equal, with 3,715 in the technical schools (2,629 of which in secondary schools) and 3,755 in the Lyceum/Grammar Schools.

The main building of the Lyceum is at Hamrun and houses 1,315 students. The largest government grammar school for girls is at Blata-1-Bajda and houses 1,302 students. The two other girls grammar schools in Malta, at Mdina and Sliema, and the one in Gozo house about 300 students each. There are two secondary technical schools for boys with a total of 1,004 students and one for

girls with 901 students. The other seven technical schools, which provide vocational and industrial training, have between them 1.210 students.

The demand for secondary education, which is provided free by the government, is very strong. In 1965, no less than 6,433 (6,205 in 1964) sought admission into government secondary/technical schools, but only 1,563 or 24.4 per cent qualified. The top 40 in the pass-list were granted scholarships to complete their second level education in a private school of their choice.

# Class Size and Pupil/Teacher Ratio:

Average class size in 1965 was 24.4 in the government grammar schools compared to 22.7 in the primary schools. There is some indication that class size tends to decline. In the grammar schools, as in the primary schools, the average class size declines as one goes up to higher grades. From an average of 28.2 in Class I, the size declines to 16.5 in Class VI. Just as in the Primary Schools the secondary schools entrance examination breaks the continuity of the course at Standard IV or V, so also in the Grammar Schools there is a discontinuity at Class V, at the end of which students usually sit for the General Certificate of Education at the Ordinary Level. In Class VI students are prepared for the Matriculation examination of the Royal University. students intending to proceed to the University take this examination.

The Sixth Form is divided into two gategories: Arts and Science. The course for each category lasts two years at the end of which students sit for three General Certificate of Education papers at Advanced Level. The wastage rate is very high. In 1965 there were 97 students in the first year and 25 in the second year of the Sixth Form. This is partly due to a bigger intake in 1964 as compared to 1963. A large proportion of the students entering the Sixth Form later fall out to seek employment or reach the age of admission into the Teacher Training Colleges. Some others attempt the Advanced Level examination half-way through the two-year course.

The average class size in the technical schools during 1965 was 23.4. The decline in average class size from Class I to Class V is even more drastic than in the Grammar Schools, the drop being from 25 to 14.6 in the technical schools as compared to 28.2 to 20.1 in the grammar schools. The wastage rate is such higher in technical schools than in the grammar schools. Only 47 pupils left the technical schools after completing the course in 1965 as compared to 647 in the grammar schools. Of the 708 students who left these schools during the year, 214 failed to complete their courses and 112 emigrated. 264 of those who left were aged 18 years and over, including 24 of those who completed the course. Another reason for the disparity in size between higher and

lower school classes is the tendency for the intake in the technical schools to increase over the years as more new schools are erected or existing ones expanded. As a rule, large numbers facilitate grouping into classes and, up to a certain extent, enable more economical use of the teacher's time.

## Teachers and other personnel:

The Maltese Islands, like many other countries at a higher stage of development, are faced with a chronic shortage of teachers at the second level. This shortage has become acute in recent years with the explosive expansion in the technical school population. As a result, temporary measures have been taken to bridge the gap between supply and demand. Besides the permanent teachers, there are visiting teachers who may be employed either full-time on a temporary basis or else part-time for a few hours a week. Teachers may also be seconded from the Government Primary Schools or hired from abroad on a contract basis. In the scientific and technical subjects, teachers are aided in practical demonstrations by laboratory or workshop technicians.

There were 275 teachers, in all, in the Lyceum and the Girls Grammar Schools. Of these, 159 (58 per cent.) were on a permanent basis, 35 (13 per cent.) were seconded from primary schools and the remaining 81 (29 per cent.) were either on a visiting or on a contract basis.

In the secondary technical schools there were 192 teachers, of whom 71 (37 per cent.) were permanent, 52 (27 per cent.) were temporary or seconded from Primary Schools while 69 (36 per cent.) were either on contract or visitors. These teachers were assisted by 11 technicians.

#### Vocational and Industrial Training:

Apart from secondary technical education which is of a general nature and aims at preparing students for a higher level of instruction, in Malta, as in most industrial countries, there are technical schools and industrial training centres which aim at preparing their pupils for a particular trade or occupation.

During 1965, the new Technical Institute at Paola started functioning and the Nautical and Tailoring Schools were transferred to it from Msida. At the end of 1965 it housed 270 students. The old institute at Hamrun still housed 258 students and there were another 221 students in a school at Imriehel and 33 in Gozo. Besides this total of 782 students receiving instruction in various trades there were 304 pupils at the Marsa Apprenticeship School where

apprentices receive part-time instruction in their trades on a day release system. There are also two industrial training centres, one in Malta with 225 trainees and one in Gozo with 35.

There were 111 teachers imparting this type of education. Of these 47 (42.4 per cent.) were permanent, 14 (12.6 per cent.) were temporary or seconded from primary schools while the remaining 50 (45 per cent.) were on contract or on a visiting basis. There were also 7 technicians.

#### Admission examinations:

Pupils seeking admission to the government grammar schools or the secor any technical schools have, since 1961, to sit for the same examinations, and are also the basis on which 40 government scholarships, to be held in private schools, are awarded.

These examinations consist of tests in English and Arithmetic and an interview. Pupils between the ages of 16 and 14 are eligible. The number of pupils sitting these examinations was 6,433 in 1965. Of these, 1,563 or 24.2 per cent, were successful as compared to 22.6 per cent, last year. The bulk of these who got through were aged 12 or 13 last birthday on the 30th September, 1964. Those aged 11 years accounted for 20 per cent, of the passes.

Best results are obtained by pupils presented by their school. Out of 2,720 such pupils 1,342 or 50 per cent. were successful while out of 3,713 not presented by their school only 221 or 5.9 per cent. were successful.

Pupils from Government schools fared relatively worse than those from private schools. The proportions of successful candidates from those who sat were 32.4 per cent. and 23.8 per cent. respectively for boys and 27.4 per cent. and 24.4 per cent. respectively for girls. Most of the failures of pupils from government schools were concentrated among those who were not presented by their school while most of the successful ones came from the fifth grade.

As regards the distribution of marks, the results for boys in English show two peaks in the ranges 0-9 and 50-59. The desire to avoid border line cases may partly account for this. The results for girls in the same subject are more like a normal distribution skewed towards lower marks though there is again a fall in frequency for the range of marks between 40 and 49. The distribution of marks for arithmetic shows maximum frequency in the 0-9 range and their frequency declines more or less exponentially, the frequency falling more sharply for boys than for girls as the higher marks are reached. It is interesting to note that for boys and girls the total number of marks (as contrasted

with the frequency with which particular marks occurred) reaches a peak in the 50-69 range. The distribution of marks for candidates from Gozo, being made up of small numbers, shows more clearly the decline in number of pupils as one goes from the 0-9 to the 40-49 range and then a sharp rise at this point followed by a sharper decline.

#### PART 5 - PRIVATE SCHOOLS

#### Enrolment:

These schools are operated by private organisations, mostly religious bodies, but the type of education they impart is on similar lines to that imparted in the Government schools and they are generally open to anybody who is prepared to pay the relevant fees. Some of the schools may be selective in the age and in the educational attainments of new entrants but these restrictions are of minor importance. All levels of education from the nursery level up to but not including, the third level are catered for by private schools in Malta. Some of the schools may have as many as three levels run concurrently in one school plant.

Total enrolment in private schools went up from 17,139 in 1959/60 to 17,990 in 1962/63 but has since tended to decline. In 1965 the total enrolment was 17,370. Of these, 16 per cent. or 2,776 were at the nursery level, 32.3 per cent.or 5,603 were in infant classes, 24.6 per cent.or 4,291 were in primary classes while 27.1 per cent. or 4,700 were at the secondary level. Only in the primary classes were there more girls than boys enrolled. The total number of boys exceeded that of girls by 618.

The main contribution of the private schools is at the second level. While 79.5 per cent. of the total enrolment at the first level was in Government schools, the share of the government at the second level fell to 57.5 per cent. In view of the fact that private schools have practically no part in technical education, the difference in percentages is quite significant. It appears that there is considerable room for expansion at the second level, the limiting factor being cost. An important function of private schools is the provision of nursery education. This type of education is important in helping the child to adapt from the freedom of home life to the necessary regimen of formal school. Nursery education is not provided in Government schools.

#### Class size and pupil/teacher ratio:

A comparison of average class size between private schools and Government schools at the nursery, primary and secondary levels is given in table 5.1.

apprentices receive part-time instruction in their trades on a day release system. There are also two industrial training centres, one in Malta with 225 trainees and one in Gozo with 35.

There were 111 teachers imparting this type of education. Of these 47 (42.4 per cent.) were permanent, 14 (12.6 per cent.) were temporary or seconded from primary schools while the remaining 50 (45 per cent.) were on contract or on a visiting basis. There were also 7 technicians.

It is interesting to note that for boys and girls the total number of marks (as contrasted

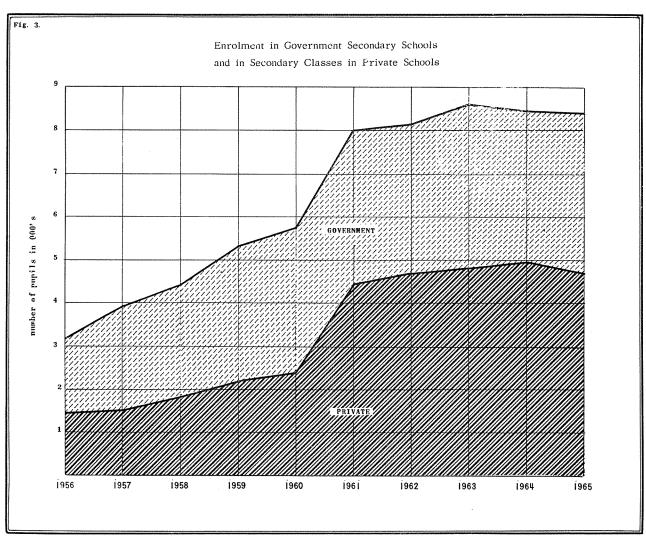

While class size has been declining continuously in the Government primary schools during the last 5 years, its tendency to rise at the primary level in private schools has been reversed in the last 2 years as shown by the figures of 29.9 in 1960 and 30.8, 31.0, 31.0, 30.1 and 26.8 in successive years. secondary level, there is a tendency for changes in class size of Government and private schools to be in opposite directions. Class size at this level was 25.2 and 24.8 in Government and private schools, respectively in 1960; the figures changed to 24.4 and 26.0 five years later. Increased demand for private school education and a desire to maximise the difference between total receipts and total costs may account for the rises in average class size in the A comparison cannot be made at the nursery level for this private schools. type of education is provided only in the private schools. Class size at the nursery level has been slipping in the last five years (39.9 in 1960, 37.5, 35.3, 36.6, 33.3 and 33.0 in the following years). Taking all levels together it results that average class size in 1965 was the smallest since 1959 in both Government and private schools.

AVERAGE NUMBER OF PUPILS PER CLASS IN GOVERNMENT AND PRIVATE SCHOOLS, 1960-55

Table 5.1

| Private achoola    | 24,8     | 27,0                                         | <b>3</b> 0,9                             | 26,0                           |
| All Lavela         |          |                                              |                                          |                                |
| Government schools | 25.6     | 24,5                                         | 23.3                                     | 22.7                           |
| Private schools    | 29.9     | 30,5                                         | 29,2                                     | 29,0                           |

Little can be said about the pupil/teacher ratio in private schools since information on the teaching staff employed in some private schools does not differentiate between nursery, primary and secondary levels. The overall ratios for all levels in the private schools were 22.2, 22.7, 22.2, 21.8, 20.6 and 20.4 in the last six years. These figures were higher than the ratios in the Government grammar and secondary technical schools but lower than those in the Government primary schools.

#### Schools and teachers:

There are 82 private schools of which 77 are in Malta. These are housed in 86 buildings with a total of 1,009 rooms of which 628 are classrooms. A number of them provide schooling at the nursery and infant levels. In all the schools teachers in service numbered 852. The backbone of this teaching force is composed of religious persons. In 1965, the private schools employed 199 priests and monks and 328 nuns. In addition to these there were 325 lay teachers, of whom 245, that is 75.5 per cent., were females. The ratio of permanent to temporary teachers was higher than in the government schools mainly because most of the teachers belong to the same institutions that own or run the schools. There were 701 permanent and 151 visiting teachers working in private schools during the 1964/65 school year.

# PART 6 - HIGHER EDUCATION

#### The University:

There were 547 regular students, of whom 447 men, at the commencement of the 1964/65 academic year, i.e., on October 1, 1964. In addition, there were 50 occasional students. An analysis of regular students by faculty shows that 19 were reading theology, 17 laws, 65 medicine and surgery, 2 dental surgery, 15 engineering and architecture, 213 arts including education and public administration and 216 science, including pharmacy.

The teaching staff of 107 comprised 25 professors, 54 lecturers and 17 demonstrators. Most of these, including the professors, work on a part-time basis. There were, in addition, 11 teachers from M.C.A.S.T. lecturing at the University.

Revenue consisted of £26,850 from registration fees and £161,000 in the form of a Government grant. Expenditure amounted to £171,121 of which £123,927 went into personal emoluments.

## The Polytechnic:

During 1964/65 the Malta College of Arts, Science and Technology was making full use of the completed part, about half, of its new premises at Msida. These buildings are designed to accommodate 850 students and have a floor area of 250,000 square feet.

In 1965, there were approximately 500 students enrolled in the Departments of Civil, Electrical and Mechanical Engineering and Science. Enrolment was mostly on a part-time basis and students were able to attend sandwich, evening and other short courses. During the year, students were also admitted into the new courses leading to the B.Sc. Eng. degree of the Royal University of Malta. The lecturing staff numbered about 45, the majority being part-time, locally recruited graduates working under the supervision of a U.N.E.S.C.O. team of experts.

# Teacher training colleges:

There are two teacher training colleges; St. Michael's for men and Mater Admirabilis for wowen. After two years full-time training on a residential basis, students from these colleges graduate and are appointed teachers, on a permanent basis, in the Government primary schools. During 1964/65 there were 130 men and 260 women at these colleges. The higher enrolment of women is made necessary by the higher demand for female teaching staff which has a high wastage rate due to the requirement that female teachers resign from their appointment on getting married.

#### PART 7 - OTHER FORMS OF EDUCATION

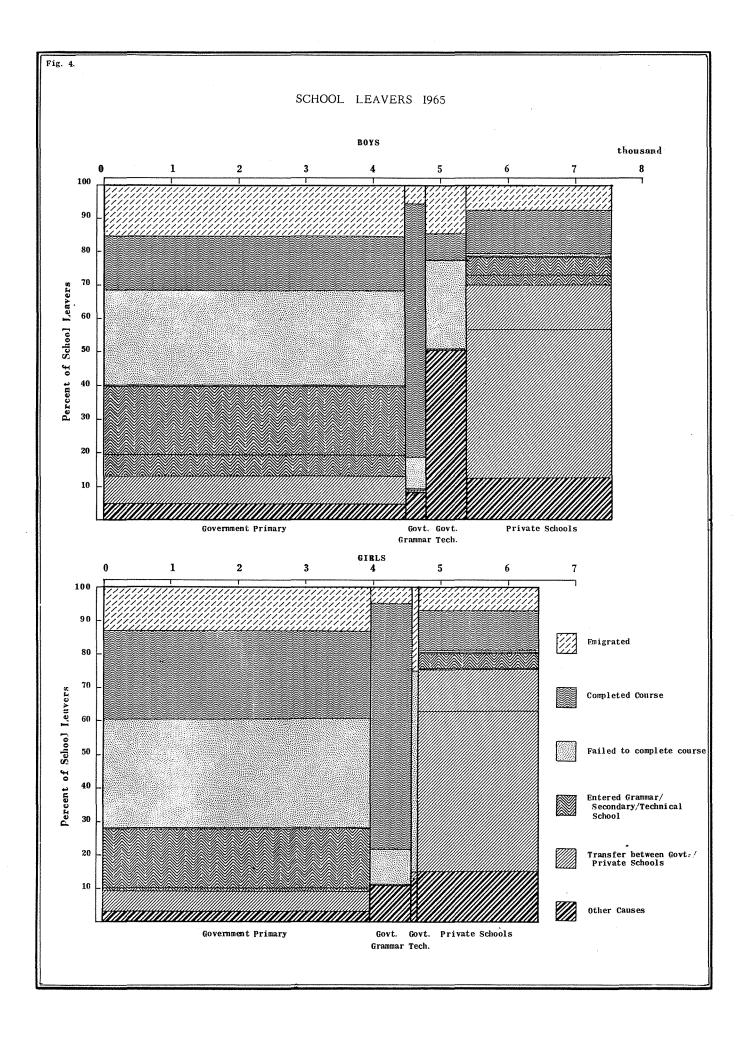

#### Schools for the physically handicapped:

An important social service that is rendered by any enlightened society is the provision of special educational and training facilities for those unfortunate children who cannot benefit from the conventional education made available for normal children.

In Malta, facilities were available in 1965 for the mentally handicapped, the educationally sub-normal, the deaf and the blind. There were three schools for the mentally retarded or handicapped with four classes each and a total enrolment of 111 pupils under the care of 6 male and 8 female teachers. The physically handicapped were catered for by one private and by two Government establishments having 43 pupils on the register and a total of 11 classes run by 6 male and 5 female teachers. All the teachers were specially trained and had qualifications acquired abroad.

#### Evening classes:

In 1965 a total of 6,053 student courses, i.e. the number of students multiplied by average number of subjects taken by each student, were conducted in the evenings by 202 teachers. There is a wide variety of subjects offered, ranging from pig husbandry and poultry keeping to principles of law and thermodynamics. These classes are meant to serve as a means of self-improvement for those who are unable, for a variety of reasons, to attend full-time day courses in their trade or calling. The importance and popularity of this type of education is bound to increase as these islands industrialize and as the general level of education rises. Education is a life process and at all levels it is necessary to keep moving forward to avoid falling back.
