41. Emigration by socio-economic groups as a percentage of the total for the years, 1976 - 1980	60
42. Number and rate of marriages, 1970 - 1980	60
43. Marriages classified by age group of participants: 1980	61
44. Marriages classified by age and previous marital condition of bride and bridegroom: 1978 - 1980	62
45. Marriages by age groups, sex and occupation of spouses: 1980	64
46. Monthly and quarterly incidence of marriages: 1970 - 1980	69
47. Civil marriages by age-groups, sex and socio-economic groups: 1980	70

## COMMENTARY

The present issue of the Demographic Review presents data on Population and Vital events in 1980. Apart from providing detailed statistical tables on vital events which occurred during the year, it also gives comparative data for previous years. The Tables are as usual preceded by a brief Commentary reviewing the main demographic features for 1980. During the year under review the Maltese population continued to grow at an acceptable rate, health standards were maintained at a high level resulting in a low infant mortality rate and a high expectation of life in respect of both sexes while the predominant diseases causing death remained those associated with countries characterised by advanced social and economic conditions.

### Population

The upward trend in the population in evidence since 1975 was retained in 1980. As at 31st December the estimated Maltese population was 318,028; 2,766 or 0.9 per cent more than at the end of the previous year. This rise was, as in the previous four years, due both to a net inflow in migration and to natural increase.

### Fertility

There was a small decline in the number of births which totalled 5,602 compared with 5,823 registered last year. This resulted in a marginal drop in the crude birth rate from 18.5 to 17.6 per 1000 persons. Total period fertility rate has been worked out at 1.98 as at end of 1980 while the Net Reproductive Rate has been estimated at .96.

### Nuptiality

The number of marriages in 1980 was 2,775 yielding a rate of 8.7 per 1,000 of the population. The number of marriages as well as the marriage rate remained high compared with the 1960 decade when the population was declining rather than increasing. The number of civil marriages during the year was 108.

### Mortality

A total of 3,215 deaths was recorded during the year under review. This was 247 more than in the previous year. The mortality rate stood at 10.7 for males and 9.5 for females. There were 85 deaths among infants under one year of age resulting in an infant mortality rate of 15.2 per 1,000 live births. The expectation of life at birth was 68.5 years for males and 72.7 years for females.

### Emigration

The reversal in the trend of a heavy outflow of migrants rather than a net inflow evident since 1975 was sustained in 1980. The net addition to the population by returning migrants in the year stood at 379. The number of persons who left Malta in 1980 was 1,374 whilst 1,753 returned to live in Malta permanently.

\* Basis: End 1980 estimates of the Maltese population

Assumptions: Mortality: Death rates for each age-group and sex will be the average of those recorded during 1978 - 1980

Natality: At actual average rates specific to age by single years of females between 14 - 49 recorded in 1978 - 1980

Emigration: Nil

9. LIVE BIRTHS: 1979 - 1980

65 & Over	95.3	101.3	75.9	80.3

## 30. ABRIDGED LIFE TABLE: 1980

Males		Age	Females	
$I_x$	$e_x^0$		$I_x$	$e_x^0$
10,000	68.49	0	10,000	72.71
9,815	68.77	1	9,884	72.56
9,802	67.86	2	9,876	71.62
9,785	66.98	3	9,865	70.70
9,782	66.00	4	9,865	69.70
9,782	65.00	5	9,854	68.78
9,756	60.17	10	9,842	63.86
9,740	55.26	15	9,834	58.91
9,706	50.45	20	9,816	54.01
9,660	45.67	25	9,784	49.18
9,632	40.80	30	9,763	44.28
9,591	35.96	35	9,756	39.31
9,542	31.13	40	9,733	34.40
9,363	26.68	45	9,640	29.71
9,100	22.38	50	9,453	25.25
8,640	18.15	55	9,298	20.62
8,010	14.07	60	8,909	16.42
7,012	10.72	65	8,135	12.74
5,518	7.94	70	6,943	9.50
3,775	5.45	75	5,449	6.42
1,906	3.35	80	3,729	3.23
328	2.49	85	458	3.41

The column  $I_x$  shows, for each sex, the number who would survive to exact age  $x$  out of 10,000 born who were subject throughout their lives to the recorded age death rates of the period. Column  $e_x^0$  is the 'expectation of life', that is the average future lifetime which would be lived by persons aged exactly  $x$ , if likewise subject to those death rates.

## 31. EXPECTATION OF LIFE, 1870 - 72 to 1980

Age	Abridged Table						Life Table No:		Abridged Table 1980
