0.0 EXECUTIVE SUMMARY

This study adopted a quantitative approach and aimed to investigate the Maltese public's perceptions of crime and security as well as the police and policing activities. In this study, a questionnaire was administered that included a number of key scales including those concerned with perceptions of crime, fear of crime, concerns and worries about crime, attitudes towards the police, and trust in the police. Notably, this study also further investigates the findings from Study 2 in Volume 1 of the Policing Report, by examining the results within different demographic groups. The following are the key findings.

0.1 KEY FINDINGS

Experiences of crime, and perceptions of crime and security

1. A small number of respondents (2.7%) indicated that they were a victim of crime and/or witnessed a crime (3.8%). More than half of these did not report the crime (69.6%).
2. A larger proportion of respondents (10.9%) believe that they are quite likely to experience crime in the next twelve months.
3. Respondents tended to rate the increase in crime in the country ($M = 3.69$, $SD = .99$), higher than in their local area ($M = 2.75$, $SD = 1.05$).
4. Respondents who indicated that they had experienced a crime were significantly more likely to report fear of crime ($M = 27.33$, $SD = 7.55$), when compared to those that had not experienced crime within the last 12 months ($M = 23.78$, $SD = 6.13$).

Perceptions of the police

1. Respondents tended to perceive the police relatively favourably. Respondents agreed the most with the statement 'Police protect us' ($M = 3.82$, $SD = .92$) and agreed the least with the statement 'Police do not discriminate' ($M = 3.25$, $SD = 1.04$).
2. Respondents indicated a high level of trust in the police (42.58).
3. Respondents who have experienced crime reported significantly less trust in the police ($M = 34.56$, $SD = 13.72$) when compared to those who have not experienced crime in the last 12 months ($M = 42.80$, $SD = 10.31$).

Demographic differences**Age**

1. Respondents aged 16-25 were more tolerant of foreigners and were generally less concerned about crime; demonstrated lower positive police perceptions and indicated lower trust in the police; were less inclined to think that police-community ties make people feel safer.
2. Respondents aged 26-35 were more tolerant of foreigners; held higher expectations of becoming victims of crime, however, demonstrated lower levels of fear of crime; had lower positive police perceptions; had lower trust in the police; were more inclined to think that police-community ties may lead to corruption.
3. Respondents aged 36-45 were more likely to perceive higher levels of crime and to be concerned about crime, however they demonstrated lower levels of fear of crime; were more likely to have lower positive perceptions of the police and community policing; were less likely to think that police-community ties may help make people feel safer.
4. Respondents aged 46-55 perceived lower levels of crime; demonstrated lower levels of fear of crime, and were less concerned about crime; were more likely to have higher positive perceptions of the police and community policing; were more likely to think that police-community ties may help make people feel safer.
5. Respondents aged 56-65 were more likely to expect falling victim of crime, however, were less likely to be concerned about crime; were more likely to have higher positive perceptions of the police; were more likely to have higher levels of trust in the police; were more likely to think that police-community ties may help make people feel safer.
6. Respondents aged 66+ were less tolerant of foreigners; held higher expectations of becoming victim of crime; perceived higher levels of crime; were quite concerned about crime, and had higher levels of fear of crime; were more likely to have higher positive perception in the police; were more likely to have higher levels of trust; were less likely to think that such police-community ties may lead to corruption.

Gender

1. Females were more likely to think that crime has increased in the country in the past few years; were more likely to feel concerned and worried about crime, as well as

experienced higher levels of fear of crime; were more likely to agree that the police should stick to their job description.

2. Males were more inclined to think that prevention of crime should be top priority and that the police should be given body cams.

Education

1. Respondents with a primary level of education were less tolerant of foreigners; demonstrated a higher level of fear of crime, and were more concerned and relatively more worried about crime; were more likely to have higher positive perceptions of the police and higher level of trust in the police.
2. Respondents with a secondary level of education were less tolerant of foreigners; were more concerned about crime and had higher levels of fear of crime; were more likely to have higher positive perceptions of the police and higher levels of trust in the police.
3. Respondents with a post-secondary level of education were less tolerant of foreigners; were less concerned about crime' were less likely to demonstrate trust in the police.
4. Respondents with a tertiary level of education were more tolerant of foreigners; were less concerned about crime; were more likely to have lower positive perceptions of the police and lower levels of trust in the police.

Relationship status

1. Widowed respondents were more inclined to think that crime has increased over the past few years; had higher levels of fear of crime; were more likely to think that police-community ties help make people feel safer.
2. Married respondents were more likely to indicate higher personal and economic security and lower levels of fear of crime; demonstrated relatively higher positive police perceptions and higher levels of trust in the police.
3. Unmarried respondents were more likely to have higher perceptions of crime and lower levels of fear of crime; were more likely to have lower positive perceptions of the police; were less inclined to think that police-community ties help make people feel safer.

4. Separated/divorced/annulled respondents were more like to indicate high economic security; were more inclined to think police-community ties may help make people feel safer.

Employment status

1. Employed respondents were more likely to demonstrate high levels of tolerance of foreigners; were more likely to indicate lower levels of fear of crime; had lower positive perceptions of the police; were more likely to agree that community-police ties may lead to corruption.
2. Students were more likely to demonstrate high levels of tolerance of foreigners; were more likely to indicate lower levels of fear of crime; had lower positive perceptions of the police; were more likely to disagree that police-community ties help make people feel safer.
3. Retired respondents were more likely to demonstrate lower levels of tolerance of foreigners; had higher levels of fear of crime; were more likely to have higher positive perceptions of the police; were more inclined to think that police-community ties may help make people feel safe.
4. Homemakers were more likely to demonstrate lower levels of tolerance of foreigners; had higher levels of fear of crime; were more likely to have higher positive perceptions of the police; were more likely to think that police-community ties may lead to corruption.
5. Unemployed respondents were more likely to have lower levels of tolerance of foreigners; were more likely to be concerned about crime and have higher levels of fear of crime; were relatively more likely to think that police-community ties may lead to corruption.

District

1. Respondents residing in Gozo and Comino had lower perceptions of crime, lower levels of fear of crime, and were less worried or concerned about crime; were more likely to have lower positive perceptions of the police; were more inclined to think that police-community ties may help make people feel safe, however, they also thought that such ties may lead to corruption.

2. Respondents residing in the Northern district were generally more tolerant of foreigners; had higher perceptions of crime and were relatively more concerned or worried about crime; were less likely to think that there should be a greater police presence on the streets, and that this presence may help crime; were less inclined to think that police-community ties may lead to people feeling safer, and more likely to think that such ties may lead to corruption
3. Respondents residing in the Northern Harbour district had relatively higher perceptions of crime and demonstrated higher levels of fear of crime; were more likely to have higher positive perceptions of the police and community policing; were more likely to think that police-community ties may help make people feel safer.
4. Respondents residing in the Southern Harbour were less tolerant of foreigners; were also concerned or worried about crime; were more likely to have higher positive perceptions of the police and community policing; were more likely to think that police-community ties may help make people feel safer, and less likely to think that such ties may lead to corruption.
5. Respondents residing in the South Eastern district had lower perceptions of crime and demonstrated lower levels of fear of crime; were more likely to have lower positive perceptions of the police; were more inclined to think that police-community ties may help make people feel safer.
6. Respondents residing in the Western district had higher perceptions of crime and were relatively more concerned about crime, however, demonstrated lower levels of fear of crime; were more likely to have higher positive perceptions of the police; were more inclined to think that police-community ties may lead to corruption.

1.0 INTRODUCTION

Now more than ever, with the introduction of community-oriented policing (The Malta Police Force, 2021), it has become important to understand the public's perception towards policing and the police. Studies that have investigated public attitudes towards policing and the police have demonstrated that different population groups express different quality of experiences with the police, with the more positive experiences tending to show more favourable attitudes (Alberton & Gorey, 2018). Furthermore, regardless of past experiences with the police, different population groups have also demonstrated different appraisals of the police. One's age, socioeconomic status, and neighbourhood in which they reside have been three significant factors that have been identified to shape perceptions of policing and the police (e.g., Lim, 2015; Reisig & Parks, 2000; Brunson & Weitzer, 2009). For instance, young people's attitudes towards the police tend to be more negative than older people (Lim, 2015). Additionally, they also demonstrate lower levels of trust. A reason for this is thought to be because young people are more likely to socialise in public spaces, thereby increasing the likelihood of contact with the police (Lim, 2015). Similarly, individuals who reside in a neighbourhood characterised by low socioeconomic conditions are more likely to express lower satisfaction with the police (Brunson & Weitzer, 2009). A cause for this is hypothesized to be that for such individuals the police are viewed as a representative or extension of a larger socioeconomic system that is thought to facilitate their disadvantaged condition (Reisig & Parks, 2000). Attitudes towards the police have also been found to be connected to perceptions of inclusion and exclusion of certain population groups, such as tolerance towards foreigners and ethnic groups (Loader, 2006). It is therefore essential to acknowledge and study the public's attitudes towards the police and policing as an activity in order to inform policing styles and intervention that can best address the needs of the people. For example, the study of attitudes can advise the ideal response behaviours of police officers, such as when to use force, how to interact with victims, what duties they are expected to undertake, and even whether or how to place more emphasis on establishing close community ties.

The purpose of this study is to investigate such citizen attitudes towards the police. Specifically, this study investigates perceptions of different population groups to allow for a better understanding of the complexity of such attitudes and the resulting policing-citizen relations. This study is an extension of Study 2 presented in Volume 1 of the Policing report. However, along with perceptions of policing activities, the present volume also presents

findings related to experiences of crime, perceptions of security, attitudes towards the police, and trust in the police. The following will firstly outline the methodology, including the scales that were utilized in this study. It will then proceed to present the results classified by demographic category and conclude with a general discussion.

2.0 METHODOLOGY

2.1 INTRODUCTION

This study was carried out with the aim of implementing a large-scale national survey to investigate the public's experiences of crime, perceptions of security, attitudes towards foreigners, and lastly, perceptions of the police and criminality. This study adopted a quantitative approach and presents key findings relating to various demographics, including, age group (16-25, 26-35, 36-45, 46-55, 56-65, 66+), gender (female, male), education (primary, secondary, post-secondary, tertiary), relationship status (widowed, married, unmarried, separated/divorced/annulled), employment status (employed, unemployed, homemaker, student, retired), and district (Gozo and Comino, Northern, Northern Harbour, Southern Harbour, South Eastern, Western).

2.2 SAMPLE

The sample for this study consisted of 1000 respondents (481 males; 516 females), who resided across various localities in Malta and Gozo, were over the age of 18 ($M = 45.04$, $SD = 16.98$), and varied in level of education; primary ($n = 51$), secondary ($n = 414$), post-secondary ($n = 211$), and tertiary ($n = 319$) (see Appendix A for full demographics). Respondents were recruited through a random telephone number generating procedure and the questionnaire was administered over a phone call held at a date and time of their choice.

2.3 RESEARCH TOOLS AND PROCEDURE

The questionnaire comprised of approximately 200 questions, depending on how the participant responded. These questions were grouped into 6 sections and the questions or statements within each of the sections were presented randomly to avoid confounding order effects (see Appendix B for full questionnaire). The following is a description of each section:

The first section was concerned with geodemographics, in which information relating to gender, nationality, place of residence, education, occupation, socioeconomic status, general outlook on life, wellbeing, and perceptions on socio-cultural aspects was collected.

The second section relates to perceptions of security. In this section participants responded by indicating the extent to which they agreed or disagreed with a series of

statements aimed to measure perceptions of three security domains (personal, cultural, economic). A description detailing which items related to which security domain may be found in Mifsud et al. (2020).

The third section was designed to measure attitudes towards immigrants living in Malta. This section comprised of socio-ethnic thermometers in which respondents rated their attitudes towards four socio-ethnic groups (Arabs, Africans, Eastern European, Western European). Furthermore, this section also included a tolerance scale where respondents were asked to rate their extent of agreement or disagreement to a number of statements relating to immigrants.

The fourth section was concerned with attitudes, perceptions, and experiences relating to criminality. This section was split into four categories: experiences of being a victim of crime and experiences on being a witness of crime; a fear of crime scale (Cops & Pleysier, 2011); a perceptions of crime scale (acquired from the Crime Survey for England and Wales, 2020); and lastly a scale regarding concerns about crime (Adams & Serpe, 2000).

The fifth section sought to measure perceptions of the police. This section was split into two; a trust in the police scale, an ad-hoc scale designed for the purpose of this survey, and a scale on perceptions of police (Nadal & Davidoff, 2015).

The sixth section was concerned with perceptions on community policing. In this section, respondents were asked to indicate the extent to which they agreed or disagreed with a series of statements relating to community policing. This section was designed by extracting statements from the qualitative interviews that were carried out in Study 1 of the Policing Report Volume 1. The aim of this section was to further investigate the qualitative findings regarding the police and community policing.

The questionnaire was given in either Maltese or English depending on the respondent's preference and took around 50 minutes to complete. Furthermore, as a reward for participation, respondents were offered the possibility of participating in a lottery in which they could win one out of fifty €100 vouchers. The entire questionnaire was piloted to ensure respondents' understanding. Data collected from the pilot was not used for analysis.

3.0 RESULTS

3.1 INTRODUCTION

We analysed descriptive statistics and conducted statistical comparisons of means and frequencies to examine results between different demographic groups (for full output see Appendix C). This chapter is split into three parts and details the results of the survey by reporting demographic findings. The first part will report results concerning experiences of crime and expectations of crime, perceptions of crime, fear of crime, concerns about crime, perceptions of security, and attitudes towards foreigners. The second part will report general results regarding perceptions of the police. The third and final part will report the demographic differences that emerged from all measures.

3.2 EXPERIENCES OF CRIME, AND PERCEPTIONS OF CRIME AND SECURITY

3.2.1 Experience of crime

Respondents were asked to indicate whether within the last twelve months they have been a victim of crime and/or been a witness of crime. 2.7% of respondents replied that they had been a victim of crime over the past 12 months (see Figure 1). A higher percentage, 3.8%, reported having witnessed crime over the past 12 months (see Figure 2).

Figure 1

Crime experienced within the last 12 months

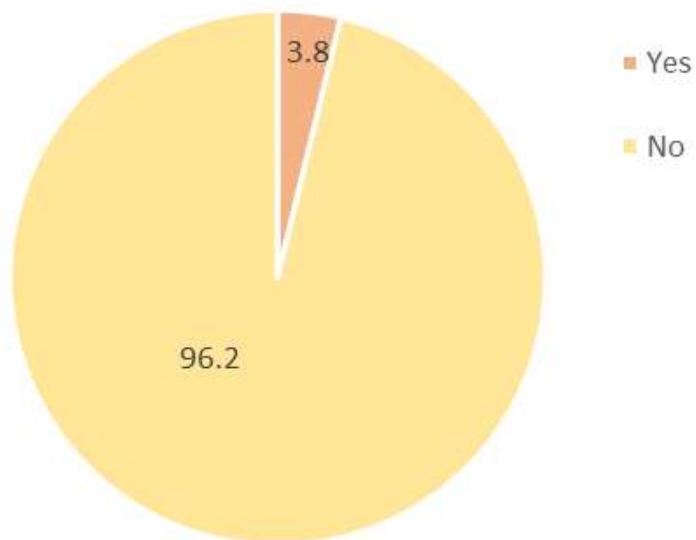

Figure 2

Crime witnessed within the last 12 months

3.2.2 Expectations of crime

In addition to past experiences of crime, respondents were also asked to indicate the extent to which they believe they are likely to experience crime and to formally report this crime. A relatively higher proportion (10.9%) believed that they would fall victim to crime in the next 12 months (see Figure 3).

Figure 3

Perceived likelihood of experiencing a crime

3.2.3 Reporting crime

Amongst those that indicated that they were a victim of crime and/or witnessed crime, more than half did not report the crime (69.6%) (see Figure 4). Nonetheless, when respondents were asked to indicate the likelihood of reporting future crime, respondents tended to indicate a high likelihood of reporting the crime ($M = 4.64$, $SD = .81$).

Figure 4**Formal reports within the last 12 months****3.2.4 Perceptions of national crime and local crime.**

Figure 5 and 6 illustrate the perceived level of increase in crime over the past few years. Overall, respondents tended to rate the increase in crime in the country ($M = 3.69$, $SD = .99$) as higher than in their local area ($M = 2.75$, $SD = 1.05$). Notably, the perceived increase in national crime received a score higher than the neutral midpoint [3], however, this was not the case for the perceived increase in local crime. In addition to this, respondents were also asked to rate the extent to which they believed that certain crimes are prevalent in their local area. Issues relating to speeding ($M = 2.95$, $SD = 1.25$), and littering ($M = 2.68$, $SD = 1.30$) were perceived to be the most problematic in one's local area (see Table 1). Conversely, issues relating to abandoned cars ($M = 2.00$, $SD = 1.19$) and sexual advances ($M = 2.03$, $SD = 1.17$) were perceived to be the least problematic of one's area.

Figure 5

Graphical illustration of perceived increase in crime in the country

Figure 6

Graphical illustration of perceived increase in crime in local area

<i>Table 1</i>		
<i>Ratings of (perceived) prevalence of crime in local area (mean) using a scale of 1 (low prevalence) to 5 (high prevalence)</i>		
	<i>M</i>	<i>Std Dev</i>
Noisy Neighbours	2.15	1.20
Teenagers	2.09	1.10
Trash	2.68	1.30
Vandalism	2.04	1.16
Drugs	2.33	1.25
Drunks	2.17	1.20
Abandoned Cars	2.00	1.19
Speed	2.95	1.25
Burglars	2.17	1.17
Sexual advances	2.03	1.17
Fighting on streets	2.05	1.16

3.2.5 Fear of crime

Respondents were asked to rate the extent of their fear of crime in eight statements. As summarised in Table 2, respondents reported fear of crime scores above the midpoint, 3, for four statements. The statement that elicited the highest score of fear of crime was: 'Too dangerous to let kids on streets unsupervised' ($M = 3.73$, $SD = 1.18$). Conversely, the statement that received the lowest scores of fear of crime was: 'I don't risk staying home alone at night' ($M = 2.10$, $SD = 1.22$).

<i>Table 2</i>		
<i>Fear of crime scores (mean) using a scale from 1 (low fear of crime) to 5 (high fear of crime)</i>		
	<i>M</i>	<i>Std Dev</i>
Too dangerous to let kids on streets unsupervised	3.73*	1.18
I don't risk going out alone at night	2.59	1.29
At night you need to be careful walking the streets	3.17*	1.26
Streets have become less safe during last 10 years	3.37*	1.19
Police are no longer capable of protecting us	2.57	1.19
I don't risk going to certain areas	2.92	1.29
Alarms are not a luxury nowadays	3.57*	1.15
I don't risk staying at home alone at night	2.10	1.22
Global Score	23.88	6.20

Note: * *Indicates a value over the neutral midpoint of the scale [3]*

3.2.6 Concerns about crime

Respondents' concerns about crime generally tended to be low. As summarised in Table 2, the highest rated object of concern was safety of loved ones ($M = 2.89$, $SD = 1.18$). However, all statements, including this, received a rating below the neutral midpoint value of the scale [3], indicating low concern.

<i>Table 3</i>		
<i>Concerns about crime scores (mean) using a scale from 1 (low concern) to 5 (high concern)</i>		
	<i>M</i>	<i>Std Dev</i>
I worry about my property	2.30	1.17
I worry about my personal safety	2.42	1.18
I worry about the safety of loved ones	2.89	1.30
I don't feel safe	2.10	1.17
There is reason to fear being a victim of crime	2.25	1.15
Global Score	11.92	4.85

In addition to general concern about crime, respondents were also asked to rate the extent to which they worry about specific crimes. Respondents tended to worry the most about online crime ($M = 3.00$, $SD = 1.28$), and the least about being raped ($M = 2.26$, $SD = 1.24$) (see Table 3). However, all statements, including these, received a score below the neutral midpoint value of the scale [3] suggesting that respondents are generally not too worried about crime.

<i>Table 3</i>		
<i>Worry about specific crimes (mean) using a scale from 1 (low worry) to 5 (high worry)</i>		
	<i>M</i>	<i>Std Dev</i>
Someone steals	2.66	1.21
Assaulted	2.64	1.24
Car stolen	2.56	1.23
Raped	2.26	1.24
Physically attacked	2.69	1.25
Online crime	3.00*	1.28

Note: * Indicates a value over the neutral midpoint of the scale [3]

3.2.7 Experiences of crime, fear of crime, and perception of crime

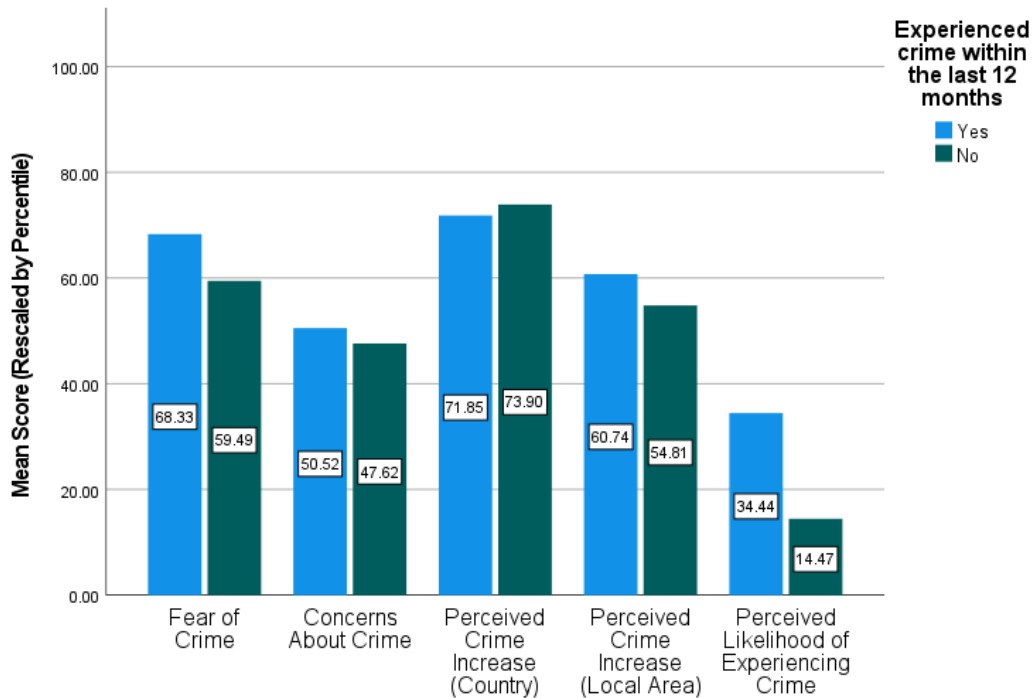

Additional analysis was carried out in order to investigate the differences in fear of crime and perceptions of crime between those that had experienced crime and those that had not. Overall, respondents who indicated that they had experienced a crime were significantly more likely to report fear of crime ($M = 28.23$, $SD = 6.06$) when compared to those that had not experienced crime within the last 12 months ($M = 23.90$, $SD = 6.09$)¹. Additionally, respondents who experienced a crime were more likely to believe that they would fall victim to crime in the near future ($M = 3.44$, $SD = 3.33$) when compared to those that had not experienced a crime ($M = 1.42$, $SD = 2.07$)². There were no significant differences in concerns about crime and perceived prevalence of crime within the local area and the country overall (see Figure 7)

¹ $t=3.58$, $df=962$, $p<0.01$

² $t=3.13$, $df=26.56$, $p<0.01$

Figure 7

Graphical illustration of differences in mean scores between those who experienced a crime within the last 12 months and those who did not

3.2.8 Attitudes towards foreigners

This section reports respondents’ levels of tolerance towards certain practices and activities relating to foreigners. In addition, it also reports general favourability of specific socio-ethnic groups, namely, Western Europeans, Eastern Europeans, Africans, and Arabs. Findings indicated that Western Europeans are perceived as the most favourable group ($M = 77.08, SD = 22.62$). This was followed by Eastern Europeans ($M = 58.50, SD = 27.47$), Africans ($M = 55.60, SD = 26.31$), and lastly Arabs ($M = 48.34, SD = 27.31$), who were the only socio-ethnic group to receive a favourability score below the midpoint (see Figure 8).

Figure 8**Graphical illustration of mean favourability towards specific socio-ethnic groups**

3.3 PERCEPTIONS OF THE POLICE

This section reports findings concerned with the general perception of the police. Respondents were asked to rate their agreeableness to a series of statements relating to the police. A measure relating to the level of trust in the police were also presented. In general, respondents tended to perceive the police favourably. All statements received a score higher than the midpoint of the scale, indicating that the police are viewed positively (see Table 4). Respondents agreed the most with the statement 'Police protect us' ($M = 3.82$, $SD = .92$) and agreed least with the statement 'Police do not discriminate' ($M = 3.25$, $SD = 1.04$). With reference to levels of trust, respondents agreed the most with the statement 'We can trust the police' ($M = 7.21$, $SD = 2.01$) and agreed least with the statement 'During the last 12 months there was an increase in police patrols' ($M = 6.65$, $SD = 2.45$) (see Table 5).

<i>Table 4</i>		
<i>Perceptions of the police (mean) using a scale from 1 (low agreeableness) to 5 (high agreeableness)</i>		
	<i>M</i>	<i>Std Dev</i>
Friendly	3.73*	0.90
Protect us	3.82*	0.91
Just	3.42*	1.01
Like	3.60*	1.01
Good people	3.78*	0.85
Do not discriminate	3.25*	1.04
Provide safety	3.81*	0.90
Helpful	3.80*	0.90
Trustworthy	3.64*	0.95
Reliable	3.58*	0.93
Unbiased	3.30*	1.00
Care	3.67*	0.96

Note: * Indicates a value over the neutral midpoint of the scale [3]

*Table 5**Trust in the police (mean) using a scale from 1 (low trust) to 10 (high trust)*

	<i>M</i>	<i>Std Dev</i>
We can trust police	7.21*	2.010
I am satisfied with police	7.17*	2.076
I trust police will do everything in their power to solve crime	7.12*	2.078
If I ever experience crime I am confident police will do their best to help	7.21*	2.022
During last 12 months there was an increase in police patrols	6.65*	2.451
The police generally treat people with respect	7.28*	2.009
Global Score	42.58	10.500

Note: * Indicates a value over the neutral midpoint of the scale [5]

3.3.1 Perceptions of the police and experience of crime

Additional analysis was carried out to investigate the differences in perceptions of the police and trust in the police between those that had experienced crime and those that had not. In general, those that had experienced crime reported significantly less trust in the police ($M = 34.56$, $SD = 13.72$) relative to those who had not experienced crime in the last 12 months ($M = 42.89$, $SD = 10.30$)³. Furthermore, those that had experienced crime were significantly less likely to agree that the police do not discriminate ($M = 2.78$, $SD = 1.25$) than those who did not experience a crime ($M = 3.26$, $SD = 1.03$)⁴. Notably, the differences between these two groups fall on either side of the neutral value [3.0]. This means to say that those who have experienced crime over the past 12 months view the police as discriminatory, unlike those who have not experienced crime.

³ $t = -3.13$, $df = 26.84$, $p < 0.01$

⁴ $t = -2.395$, $df = 979$, $p < 0.05$

There was also a significant difference in agreement as to whether the police are reliable, unbiased, and caring. In particular, those who experienced crime were less likely to agree that the police are reliable ($M = 2.81, SD = 1.18$)⁵, unbiased ($M = 2.67, SD = 1.14$)⁶, and caring ($M = 3.15, SD = 1.29$)⁷ when compared to those who had not experienced a crime ($M = 3.61, SD = .92; M = 3.32, SD = .99; M = 3.68, SD = .95$) (see Figure 9 for illustration). It is worth noting that the mean scores of those who have experienced crime, unlike those who have not, lie in negative territory for how reliable and how unbiased the police are deemed to be.

Figure 9

Graphical illustration of differences in global mean scores between those who experienced a crime within the last 12 months and those who did not

⁵ $t = -3.458, df = 26.90, p < 0.01$

⁶ $t = -3.366, df = 977, p < 0.01$

⁷ $t = -2.132, df = 26.793, p < 0.05$

3.4 DEMOGRAPHIC DIFFERENCES

This section outlines the findings relative to each demographic category under investigation, namely age, gender, education, relationship status, employment status, and district. It is worth noting that we also include demographic analyses of findings which we presented in Volume 1 of the Policing Report. The structure of the following presentation of findings is as follows: for each demographic category measures that demonstrated no significant differences will be presented first. The report will then proceed to highlight the noteworthy significant differences for each demographic category in turn* (for output of results see Appendix C).

3.4.1 Age

Age distribution was categorised into six groups: i. 16-25, ii. 26-35, iii. 36-45, iv. 46-55, v. 56-65, and vi. 66+. No differences between these groups emerged with respect to the level of favourability to Western Europeans, the perception that crime increased over the past few years, and perceptions of security. With regards to perceptions of the police, no statistically significant differences transpired for the notion that police are laid back and that they should stick to their job description. With regards to perceptions of policing, no differences emerged in the notion that police should be free to stop and search at will and that CCTV is abusive (see Tables C.1 in Appendix C).

16-25. In general, those aged 16-25 were more likely to believe that they will fall victim to crime over the next 12 months. In addition, they were also more likely to perceive higher levels of crime but also less likely to be concerned about crime. With respect to attitudes towards foreigners, those aged 16-25 demonstrated a higher level of tolerance.

The age group 16-25 was also less likely to expect the police to go beyond their call of duty. They tended to believe that neither catching the criminal is most important nor that prevention of crime should be given priority. With respect to other contentious issues of policing, they were more likely to agree that the police should be allowed to use force, however, they disagreed with the claim that police should be free to stop and search and that they should be given body cams. The use of CCTV was also not viewed positively. Those aged 16-25 were less likely to agree that CCTV helps catch criminals. Attitudes towards the police tended to be relatively negative. This age group was less likely to believe that the

* Only differences $p < .05$ will be reported

police are motivated by a sense of duty, that they are effective in their work, that they help solve cases, and that their job is a vocation. More presence of police in the streets was also not viewed favourably. Overall, those aged 16-25 tended to demonstrate low levels of trust and low positive perceptions of the police. Similarly, community policing and the use of social media was not viewed positively. Those

aged 16-25 were more likely to think that police-community ties would not make people feel safe. They also did not think that it is better to report crime in person.

26-35. Those aged 26-35 demonstrated high tolerance of foreigners and relatively more favourable attitudes towards Eastern Europeans, Africans, and Arabs. With respect to perceptions of crime, they perceived high levels of crime and held higher expectations of becoming victims of crime. Despite this, they demonstrated low levels of fear of crime and were relatively unconcerned about crime.

The 26-35 age group do not expect the police to go beyond their call of duty, they do not think that catching criminals is the most important task, but believe that prevention should be given top priority. They were also less inclined to agree with the use of CCTV, believing it violates privacy and that it does not help catch criminals. Perceptions of the police were also quite negative. Those aged 26-35 were less likely to believe that the police help solve cases and that there should be a greater physical presence of police on the streets. They were also more inclined to think that heightened police presence on the streets feels like surveillance and that it is better to have more police in stations rather than on the streets. With respect to community policing, this age group was more likely to think that police-community ties may lead to corruption. Additionally, they also did not view the use of social media favourably, believing it a waste of police time. However, they were less likely to think that it is better to report crime in person.

36-45. In general, those aged 36-45 were likely to perceive high levels of crime. They were also more likely to be concerned about crime, although they did not demonstrate high levels of fear of crime.

Similarly to the aforementioned age groups, those aged 36-45 did not tend to expect the police to go beyond their call of duty. They were also less likely to think that catching

criminals is the most important task but that prevention should be given priority. With regards to the use of force, they tended to believe that the police should not be allowed to use force unless absolutely necessary. Nevertheless, they demonstrated a relatively higher endorsement for police stop and search. CCTV was not perceived favourably with this age group reporting that it violates privacy and does not help much with catching criminals. With respect to perceptions of the police, those aged 36-45 demonstrated relatively low positive perceptions. As in the younger age cohorts, they believed that police are not motivated by a sense of duty, are not effective in their work, and hardly ever solve cases. They were also relatively less inclined to think that an increased police presence on the streets prevents crime. Consequently, they tended to agree that it would be better to have police in stations rather than on the streets. Lastly, with regards to community policing and the use of social media, they also similarly thought that police-community ties do not make people feel safe and social media was perceived to be a waste of time. However, they were also less likely to think that it is better to report crime in person.

46-55. Those aged 46-55 were less likely to view Eastern Europeans and Africans favourably. Furthermore, unlike the younger cohorts, they had relatively lower expectations of becoming victims of crime and perceived lower levels of crime. Indeed, they also demonstrated lower fear of crime and were not inclined to be concerned about crime.

As opposed to the younger cohorts, this age group tended to expect the police to go beyond their call of duty. They were also more likely to think that catching criminals is the most important task and that prevention should be given priority. Furthermore, they had a relatively high endorsement for CCTV and were not concerned about any related issues of privacy. Overall, perceptions of the police were relatively favourable. They were more likely to believe that police are motivated by a sense of duty, that they are effective in their work, and that they help solve cases. Consequently, they also demonstrated a high level of trust in the police. Those aged 46-55 were also more likely to think of policing as a vocation. With regards to physical presence, they were somewhat more inclined to think that police presence on the streets helps in preventing crime. Lastly, in relation to community policing and social media, they were more likely to think that police-community ties may help in making people feel safe and they were not concerned as to whether this may lead to corruption. Similarly to younger cohorts, however, they believed that the use of social media wastes police times. On

the other hand, unlike younger cohorts, they were more inclined to think that it is better to report crime in person.

56-65. Those aged 56-65 did not tend to view Eastern Europeans and Africans favourably. As for expectations of crime, they have relatively higher expectations of becoming victims of crime. Nonetheless, they perceived lower levels of crime and were not as concerned about crime in general.

Similarly to those aged 46-55, this age group had relatively high expectations that the police should go beyond their call of duty. Furthermore, they also thought that catching criminals is the most important task and that prevention should be given priority. CCTVs were also viewed positively as they were more likely to think that this helps in catching criminals and were less likely to be concerned about issues of privacy that may arise out of it. On par with the younger cohorts, those aged 56-65 had a relatively high endorsement for police stop and search and relatively lower endorsement for the use of force. Perceptions of the police were quite positive, as were levels of trust. Overall, they were more likely to think that the police are motivated by a sense of duty, are effective in their work, and help solve cases. They were also relatively more inclined to think that there should be more police on the streets and that police presence may help prevent crime. In addition to this, they also thought that there should be more police in stations. In relation to community policing and the use of social media, this age group was more likely to think that police-community ties may help people feel safe and they were less concerned about possible issues of corruption. As with the other younger cohorts, however, they thought of social media as a waste of police time.

66+. Those aged 66+ demonstrated low levels of tolerance of foreigners and did not tend to view Eastern Europeans, Africans, and Arabs favourably. Furthermore, they had relatively higher expectations of becoming victims of crime, perceived higher levels of crime and were relatively concerned about crime. Moreover, they also demonstrated relatively higher levels of fear of crime.

This age group had relatively high expectations that the police should go beyond their call of duty. In addition, they were also more inclined to think that catching criminals is the

most important task and that prevention should be given priority. The use of force was not perceived positively, but police stop and search tended to be perceived favourably. With regards to CCTV, those aged 66+ were more likely to think that the use of CCTV may help in catching criminals and were not concerned about issues of privacy that may arise out of it. Police perceptions and levels of trust were relatively positive. Those aged 66+ were likely to believe that police are motivated by a sense of duty, that they are effective in their work and that they help solve cases. They were also more likely to think of policing as a vocation. With regards to physical presence, this age group was more likely to think that there should be more police on the streets and that police presence may help with preventing crime. In the same vein, they were relatively less inclined to think that more police presence feels like excessive surveillance, favouring police on the streets rather than in stations. Finally, as for community policing and the use of social media, those aged 66+ were more inclined to think that police-community ties may help make people feel safer. They did not demonstrate any concerns relating to issues of corruption that may arise out of closer police-community ties. Social media was viewed quite positively such that they were less likely to think that social media is a waste of police time.

3.4.2 Gender

There were no gender differences with regards to levels of tolerance of foreigners and levels of favourability of specific socio-ethnic groups. Furthermore, perceptions of security did not differ between the two genders. With regards to experiences of crime, there were no gender differences in the perceived likelihood of experiencing crime. Perceptions of the policing also did not differ greatly. Men and women were equally likely to agree that the police should go beyond their call of duty, that catching criminals is the most important task and that police should be free to stop and search, whilst still acknowledging that it may be abusive. CCTVs were also equally well appraised by both genders. In addition, there was a relatively positive perception of the police. Both men and women agreed that not all police are laid back, that they are motivated by a sense of duty, that they are effective, and that they help solve cases. They were also likely to think of policing as a vocation. With regards to surveillance, both men and women agreed that there should be greater presence of police on the streets and that this may lead to better crime prevention. Lastly, social media was viewed positively by both genders. Social media tended to be viewed as a good tool to facilitate

better communications with people. However, both genders were inclined to think that it is better to report crime in person (see Table C.2 in Appendix C).

Female. Relative to males, females were more likely to think that crime has increased in the country over the past few years. Furthermore, they demonstrated more concern and worry about crime, as well as higher levels of fear of crime.

Females were also more likely than males to agree that the police should stick to their job description and that body cams violate privacy. With regards to physical presence, female respondents preferred to have more police in stations rather than on the streets. They were also more likely to believe that police-community ties may lead to corruption. Lastly, they viewed social media as a waste of police time.

Male. Relative to females, males were more inclined to think that prevention of crime should be top priority and that the police should be given body cams.

3.4.3 Education

Education was split into four categories: primary, secondary, post-secondary, and tertiary. There were no education differences in the perceived likelihood of experiencing crime. In addition, there was also no educational differences in certain perceptions of police and policing. More specifically, respondents tended to agree that the police should go beyond their call of duty, that they should not be allowed to use force unless absolutely necessary, and that the police should be given body cams despite acknowledging that this may violate privacy. CCTVs were perceived positively such that, regardless of educational differences, respondents agreed that they help to catch criminals, albeit they violate privacy. Similarly, the increase of police numbers on the streets was perceived positively. Respondents tended to agree that more police on the streets prevents crime, despite the fact that this may lead to feelings of surveillance. Furthermore, there were no educational differences with regards to whether community-police ties may lead to corruption as well as their making people feel safer. Lastly, there were no educational differences with regards to whether the police's use of social media may lead to better communication with people (see Table C.3 in Appendix C).

Primary. Respondents with a primary level of education were less favourable of Africans and Arabs and were, overall, less tolerant of foreigners. With regards to perceptions of crime and security, they were more likely to perceive an increase in crime over the past few years, they had a higher level of fear of crime, and they were more concerned and relatively more worried about crime. They were also more likely to feel culturally insecure.

Perceptions of the police were quite positive. Those with a primary level of education were more likely to think that the police are effective in their work and had more trust in the police. Lastly, they were less inclined to think that it is better to report crime in person.

Secondary. Those with a secondary level of education were less tolerant of foreigners. They were also less favourable of Western Europeans and Eastern Europeans, however, tended to be more favourable of Arabs. Regarding perceptions of crime and security, they were less likely to feel culturally secure and were more concerned about crime. They also had higher levels of fear of crime.

With regards to policing, secondary educated respondents were more inclined to think that police should be free to stop and search, and less likely to be concerned about abuse that may arise from it. Police perceptions were relatively positive, as was trust in the police. Overall, those with a secondary level of education were less likely to think that police are laid back. Finally, social media was generally not perceived positively. Secondary educated respondents were more likely to think that it is a waste of police time and that it is better to report crimes in person.

Post-Secondary. Post-secondary educated respondents were relatively more tolerant of foreigners. They were also more favourable of Western Europeans, Eastern Europeans, Africans, and Arabs. With regards to perceptions of crime and security, they were less concerned about crime and more likely to feel culturally secure.

Those with a post-secondary level of education were less inclined to think that police should be free to stop and search and to think that this may be abusive. They tended to

demonstrate less trust in the police and were also less likely to think that the police are very effective in their work.

Tertiary. Respondents with a tertiary level of education were more likely to be tolerant of foreigners. Like their post-secondary counterparts, they were also more favourable of Western Europeans, Eastern Europeans, Africans, and Arabs. With regards to perceptions of crime and security, they were less likely to perceive the country to have experienced more crime over the past few years. They were also less afraid of crime, and less worried or concerned about crime. Overall, they felt more culturally secure.

With regards to perceptions of policing, they were less inclined to think that the police should stick to their job description, that catching criminals is the most important task, and that police should be free to stop and search, even though they reported that police stop and search may be abusive. Police perceptions tended to be less positive and trust in the police tended to be low. Overall, tertiary educated respondents were less inclined to think that the police are very effective in their work and that they are motivated by a sense of duty. They were also less likely to agree that not all police are laid back. Lastly, social media was less likely to be perceived as a waste of police time and that it is better to report crimes in person.

3.4.4 Relationship status

Relationship status was categorized into four groups: i. widowed, ii. married, iii. unmarried, and iv. separated/divorced/annulled. Regardless of relationship status, respondents were equally favourable of Western Europeans and Eastern Europeans. The level of tolerance of foreigners was also unaffected by relationship status. As for perceptions of crime and security, relationship status had no effect on the perceived likelihood of experiencing crime in the future. Respondents were also equally concerned or worried about crime. Perceptions of cultural security also did not differ by relationship status. With respect to policing, there were no relationship status differences in the perception that prevention of crime should be given more priority and whether police stop and search is abusive. Furthermore, as for perceptions of the police, there were no differences as to whether police work is considered more as a vocation, whether it is better to have more police in stations rather than on the streets, and whether police on the streets elicit feelings of surveillance. Lastly, in terms of social media,

there were no differences as to whether social media results in better communication with people and whether it is better to report crime personally rather than on social media (see Tables C.4 in Appendix C).

Widowed. Widowed respondents were less favourable of Africans and Arabs. In relation to perceptions of security, they were less likely to feel culturally and economically secure. They were also more inclined to think that crime in the country has increased over the past few years, indicating higher levels of fear of crime.

With respect to perceptions of policing, they were more likely to think that police should go beyond their call of duty, that catching criminals is the most important task, that police should not be allowed to use force, that the police should be allowed to stop and search, and that the police should be given body cams. Furthermore, they were also more inclined to think that CCTV may be abused, that there should be greater police presence on the streets, and that this increase in police presence may help prevent crime. Perceptions of community policing were quite positive. Widowed respondents were relatively less likely to think that police-community ties lead to corruption, and more likely to think that this may indeed lead to people feeling safer.

Married. Married respondents were relatively more favourable of Africans and Arabs. They also demonstrated high personal and economic security. Perceptions of crime were such that they were less likely to think that crime in the country has increased over the past few years. Furthermore, they also demonstrated lower levels of fear of crime.

With regards to perceptions of policing, married respondents were less inclined to think that catching criminals is the most important task and that the police should be given body cams. Conversely, they were more likely to think that the police should be allowed to use force and that they should also be allowed to stop and search. As for perceptions of the police, married respondents tended to be more likely to think that only a few police are laid back, that they are motivated by a sense of duty, that they are effective in their work, and that they help solve cases. Therefore, overall, married respondents demonstrated relatively high positive police perceptions and high levels of trust in the police. With regards to physical

presence of the police, they were relatively more likely to think that there should be a greater police presence on the streets and that this may lead to prevention of crime.

Unmarried. Unmarried respondents tended to be more favourable of Africans and Arabs. They were also less likely to think that crime in the country has increased over the past few years. Nonetheless, they were more likely to have high perceptions of crime, albeit demonstrating lower levels of fear of crime. Perceptions of security were such that they demonstrated low economic security but high personal security.

With respect to perceptions of policing, unmarried respondents were less likely to think that the police should go beyond their call of duty, that catching criminals is the most important task, that police should be given body cams, that police should be able to stop and search, and that CCTVs help catch criminals. Conversely, they were more likely to think that body cams violate privacy and that police should be allowed to use force. Perceptions of the police tended to be less positive and trust in the police tended to be low. Unmarried respondents were less inclined to think that only a few police are laid back, that the police are motivated by a sense of duty, that they are effective in their work, and that they help solve cases. In addition, they were also less inclined to think that there should be a greater police presence on the streets, and that a greater police presence may help prevent crime. Community policing was similarly perceived less positively. Unmarried respondents were relatively less inclined to think that police-community ties make people feel safe, and were more inclined to think that police-community ties may lead to corruption. Lastly, in relation to social media, unmarried respondents were more likely to think that social media is a waste of police time.

Separated/divorced/annulled. Respondents falling under this demographic category demonstrated relatively high economic security. As for perceptions of policing, they were more likely to think that catching criminals is the most important task. They were also more likely to believe that a greater police presence on the streets may lead to prevention of crime. Conversely, they were less likely to think that police should be allowed to use force, that police should be allowed to stop and search, that body cams violate privacy, and that CCTVs may be abused. Perceptions of community policing were such that they were relatively more

likely to think that police-community ties make people feel safe. However, overall, separated/divorced/annulled respondents demonstrated low levels of trust in the police. Lastly, they were relatively less likely to think that social media wastes police time.

3.4.5 Employment status

The demographic category of employment status was split into five: i. employed, ii. student, iii. retired, iv. homemaker, and v. unemployed. There were no employment status differences in the perceived likelihood of experiencing crime in the future. There were also no differences in overall perceptions of crime. As for perceptions of policing, there were no differences as to whether CCTVs violate privacy and whether they may be abused. Furthermore, there were no differences as to whether police stop and search may be abusive, and whether the police hardly ever solve cases (see Table C.5 in Appendix C).

Employed. Respondents who are employed were more likely to demonstrate favourability of Western Europeans, Eastern Europeans, Africans, and Arabs. They were also relatively tolerant of foreigners in general. With regards to perceptions of security, they were more likely to feel economically secure. Overall, they were less concerned or worried about crime and demonstrated lower levels of fear of crime.

With respect to perceptions of policing, employed respondents were relatively less likely to think that police should stick to their job description, that catching criminals is the most important task, that prevention should be given top priority, that police should be given body cams, and that CCTVs help catch criminals. Conversely, they were more likely to agree that police should be allowed to use force and that they should be free to stop and search. Perceptions of the police were not quite positive such that employed respondents were less inclined to think that police are motivated by a sense of duty, that they are effective in their work, and that only few police are laid back. Additionally, they also tended to disagree that there should be greater police presence and that police presence helps prevent crime. In the same vein, they were more likely to report that greater police presence on the streets feels like surveillance. Community policing was also not perceived quite so positively, such that

employed respondents were more likely to think that police-community ties lead to corruption, and less likely to think that it leads to people feeling safe. Lastly, employed respondents tended to disagree that social media enables communication, also reporting that social media wastes police time. However, they were less likely to think that police reports should be filed in person (see Table C.14 and C.15 in Appendix C for full output of results).

Student. Students tended to be favourable of Eastern Europeans, Africans, and Arabs. They also demonstrated high tolerance levels of foreigners. As for perceptions of security, they were relatively culturally and economically secure. Furthermore, they demonstrated relatively lower levels of fear of crime.

With regards to perceptions of policing, students were relatively less likely to think that catching criminals is the most important task, that police should be given body cams, that body cams violate privacy, and that the police should be free to stop and search. Perceptions of the police were not quite positive. Students were relatively less inclined to think that police are motivated by a sense of duty and that they are effective in their work. They also did not think of policing as a vocation and disagreed that greater police presence prevents crime. Community policing was also not viewed quite so positively, such that students were less likely to think that police-community ties make people feel safe. Lastly, they were less likely to think that the use of social media by the police enables communication with people.

Retired. Retired respondents were less favourable of Western Europeans, Eastern Europeans, Africans, and Arabs. Overall, they also demonstrated low levels of tolerance of foreigners. As for perceptions of security, retired respondents felt less culturally secure and more economically secure. Furthermore, they were also relatively more concerned about crime but worried less about crime. Fear of crime levels tended to be higher than other groups.

With regards to perceptions of policing, retired respondents were relatively less likely to think that the police should stick to their job description and that catching criminals is the most important task. Conversely, they were more likely to think that prevention should be given priority, that police should not be allowed to use force, that police should be free to stop and search, that police should be given body cams, that body cams violate privacy, and

that CCTVs help catch criminals. Perceptions of the police tended to be positive such that retired respondents were more likely to think that only few police are laid back, that police are motivated by a sense of duty, and that police are effective in their work. They also agreed that there should be greater street presence and that greater street presence prevents crime. In line with this, they were relatively less likely to think that greater street presence feels like surveillance and that there should be more police in stations rather than on the streets. With respect to community policing, retired respondents tended to be more likely to think that police-community ties make people feel safer, and less likely to think that such ties may lead to corruption. Lastly, social media was viewed quite positively. Retired respondents were more likely to think that social media enables communication and less likely to think that social media wastes police time.

Homemaker. Homemakers were less favourable of Western Europeans, Eastern Europeans, Africans, and Arabs. They also demonstrated low levels of tolerance of foreigners. As for perceptions of security, homemakers felt less culturally secure. Additionally, they were also relatively more concerned and worried about crime and demonstrated higher levels of fear of crime.

With respect to perceptions of policing, homemakers were relatively more likely to think that police should stick to their job description, that catching criminals is the most important task, that police should be free to stop and search, and that CCTVs help catch criminals. Conversely, they were less likely to think that body cams violate privacy. Perceptions of the police were quite positive. Homemakers tended to be more likely to think that only a few police are laid back, that police are motivated by a sense of duty, and that police are effective in their work. They were also more inclined to think of policing as a vocation and that there should be a greater physical presence of the police on the streets, albeit considering that this is more likely to lead to feelings of surveillance. In the same vein, homemakers were also more inclined to think that there should be more police in stations rather than on the streets. As for community policing, homemakers were relatively more likely to think that police-community ties make people feel safe and that these ties may lead to corruption. Lastly, with respect to social media, homemakers tended to be more likely to think of social media as a waste of police time, and less likely to think that it enables communication. Indeed, they were relatively more in favour that police reports should be filed in person.

Unemployed. Unemployed respondents demonstrated less tolerance of foreigners. As for perceptions of security they tended to be less personally, culturally, and economically secure. They were also relatively more worried about crime and demonstrated higher levels of fear of crime. With regards to community policing, they were relatively more likely to think that police-community ties lead to corruption.

3.4.6 District

The localities in which respondents resided were split into six districts: i. Gozo and Comino, ii. Northern, iii. Northern Harbour, iv. Southern Harbour, v. South Eastern, and vi. Western. Regarding perceptions of security, there was no effect of district on economic security. As for perceptions of policing, the district in which one resided had no effect on whether police should stick to their job description. Furthermore, district had no effect on what one thinks as to whether police stop and search is abusive and whether social media is a waste of police time. Lastly, there were no differences of district in the level of police trust (see Table C.6 in Appendix C).

Gozo and Comino. Respondents residing in Gozo and Comino demonstrated more favourability of Africans and Arabs. They were also more likely to feel personally secure. With respect to perceptions of crime, they were more likely to think that crime has increased over the past few years. However, they had lower perceptions of crime, lower levels of fear of crime, and were overall less worried or concerned about crime.

Regarding perceptions of policing, those residing in Gozo and Comino were less inclined to think that catching criminals is the most important task. Conversely, they were more inclined to think that CCTV violates privacy, that it may be abused, and that police should be allowed to stop and search. Perceptions of the police tended to be less positive. Gozo and Comino residents were more inclined to think that the police hardly ever solve cases and that they are ineffective in their work. In addition, they were more likely to think that there should be a greater police presence on the streets and that this presence may help prevent crime. Lastly, in relation to community police, Gozo and Comino residents were more inclined to think that police-community ties may help make people feel safe, however, they also thought that such ties may lead to corruption.

Northern. Respondents residing in the Northern district were relatively more favourable of Western Europeans, Eastern Europeans, Africans, and Arabs. Overall, they also tended to be more tolerant of foreigners. Perceptions of cultural security and personal security tended to be higher. As for perceptions of crime, residents of the Northern district were more likely to think that they will fall victim to crime. Furthermore, they had higher perceptions of crime and were relatively more concerned and worried about crime. Nevertheless, they were also more likely to think that crime has not increased over the past few years and demonstrated relatively lower levels of fear of crime.

Northern district residents were less inclined to think that the police should go beyond their call of duty, that prevention should be a priority, that the police should be given body cams, and that CCTVs help catch criminals. Indeed, they were more inclined to think that body cams as well as CCTVs violate privacy, and that police should be allowed to stop and search. In relation to perceptions of the police, Northern district residents were less inclined to think that police are effective in their work, that they help solve cases, and that not all police are laid back. Additionally, they were also less likely to think that there should be a greater police presence on the streets, and that this presence may help prevent crime. However, they were also less inclined to think that it is better to have more police in stations rather than on the streets. As for perceptions of community policing, Northern district residents tended to be less inclined to think that police-community ties may lead to people feeling safe and more likely to think that such ties may lead to corruption. Lastly, regarding the use of social media, they tended to be in favour of social media as a way of facilitating communication, and less inclined to think that police reports should be filed in person.

Northern Harbour. Respondents residing in the Northern Harbour district were more favourable of Western Europeans and Eastern Europeans. However, they were less favourable towards Africans and Arabs. In addition, Northern Harbour district residents tended to feel less personally secure. Regarding perceptions of crime, they were more inclined to think that crime has increased over the past few years, and they had relatively higher perceptions of crime. Furthermore, they were more likely to be concerned and worried about crime, and demonstrated higher levels of fear of crime.

With regards to perceptions of policing, Northern Harbour district residents were more inclined to think that the police should go beyond their call of duty, that catching criminals is

the most important task, and that prevention should be a priority. Additionally, they were more inclined to think that police should not be allowed to use force, that police should be given body cams, and that CCTVs help catch criminals. Nevertheless, they also thought that both body cams and CCTVs violate privacy. Perceptions of the police were relatively more positive such that they were more inclined to think that only a few police are laid back, and that police are effective in their work. However, they were also likely to think that police hardly ever solve cases, that there should be a greater police presence on the streets, and that this presence may help crime, albeit eliciting feelings of surveillance. Community policing was also viewed positively such that they were more inclined to think that police-community ties make people feel safe. Lastly, regarding social media, Northern Harbour district residents were more inclined to think that it may help facilitate communication. However, they were more favourable of the notion that police reports should be filed in person.

Southern Harbour. Respondents residing in the Southern Harbour district were relatively less favourable of Western Europeans, Eastern Europeans, Africans, and Arabs. Overall, they also tended to be less tolerant of foreigners. Regarding perceptions of security, they were less likely to feel personally and culturally secure. As for perceptions of crimes, Southern Harbour district residents were more inclined to think that crime has increased over the past few years. However, they reported lower perceptions of crime and were less concerned and worried about crime.

Regarding perceptions of policing, Southern Harbour district residents were more inclined to think that police should go beyond their call of duty, that catching criminals is the most important task, that prevention should be a priority, and that police should not be allowed to use force. Furthermore, they were also more likely to think that police should be given body cams, that CCTVs help catch criminals, and that CCTVs may be misused. Conversely, they were less likely to think that body cams and CCTVs violate privacy. Perceptions of the police tended to be more positive such that Southern Harbour district residents were more inclined to think that police are effective and that they help solve cases. They also were more likely to agree that there should be a greater police presence on the streets and that this presence may help prevent crime. Indeed, they were less inclined to think that police presence on the streets feels like surveillance. With respect to community policing, they were more inclined to think that police-community ties make people feel safe,

and less inclined to think that such ties may lead to corruption. Lastly, regarding social media, they were more inclined to think that social media facilitates communication, however, they were more likely to think that police reports should be filed in person.

South Eastern. Respondents residing in the South Eastern district were relatively less favourable of Western Europeans, Africans, and Arabs. Regarding perceptions of security and crime, they felt relatively more personally secure, they had relatively lower expectations that they may become victims of crime, and they had lower perceptions of crime. They were also less concerned and worried about crime, and demonstrated lower levels of fear of crime.

With respect to perceptions of policing, South Eastern district residents were relatively more inclined to think that police should go beyond their call of duty, and that catching criminals is the most important task. Furthermore, they were also more inclined to think that CCTVs help catch criminals and less inclined to think that CCTVs as well as body cams may violate privacy. They also were less in favour of police stop and search. With respect to perceptions of police, they were relatively less positive. South Eastern district resident were less inclined to think that only a few police are laid back, that there should be a greater police presence on the streets, and that this presence may help prevent crime. However, they were more likely to think that police are effective in their work and that they help solve cases. Community policing was more likely to be viewed positively such that they tended to agree that police-community ties may help make people feel safe. Finally, social media was not viewed as a means to facilitate communication.

Western. Respondents residing in the Western district were relatively less favourable of Western Europeans, Africans, and Arabs. Regarding perceptions of security and crime, they were relatively more likely to feel personally secure, had lower expectations that they may fall victim to crime in the future, and did not perceive an increase in crime over the past few years. Furthermore, they had higher perceptions of crime and were relatively more concerned about crime. However, they had lower levels of fear of crime.

Western district residents were relatively less inclined to think that the police should go beyond their call of duty and that they should be given body cams, thinking that it may violate privacy. They also were less inclined to think that CCTVs help catch criminals, and

more inclined to think that they may violate privacy. Conversely, they were more inclined to think that police should be allowed to use force. Perceptions of the police were relatively more positive such that they were more inclined to think that only a few police are laid back. Nonetheless, they were also likely to think that police hardly ever solve cases, that there should be a greater police presence on the streets, and that this presence may help prevent crime. Indeed, they were more in favour of having police in stations rather than on the streets. As for community policing, Western district residents were less favourable such that they were less inclined to think that police-community ties may help make people feel safe, and more inclined to think that such ties may lead to corruption. Lastly, respondents residing in the Western district were less likely to agree that police reports should be filed in person.

4.0 DISCUSSION

This study primarily investigated the public's perceptions of the police and policing activities. The level of trust in the police, global positive perceptions of the police, and confidence in their effectiveness were key areas of interest. It is noteworthy to highlight that only a small number of respondents indicated that they had been a victim of crime (2.7%) and/or witnessed a crime (3.8%) within the last twelve months. However, a much larger proportion expect to be victim of crime over the next twelve months (10.9%). Overall, this suggests that much of the findings emerge from general perceptions about the police and not personal experience. However, it is also worth noting the particular experiences of those who have fallen victims of crime. The following will summarise and discuss the main findings.

4.1 EXPERIENCE, EXPECTATIONS, AND PERCEPTIONS OF CRIME

As noted in the aforementioned only a minority of respondents indicated that they had experiences of crime. Interestingly, however, when asked to rate the expectation of falling victim to crime in the near future, a larger proportion of respondents held expectations that they would. There appears to be a mismatch between experience of crime and expectation of crime such that the public tends to overestimate the likelihood that they would fall victim to crime. Additionally, the public also tends to overestimate the likelihood that they would report the crime. Whereas a minority of respondents indicated that they reported the crime they had witnessed and/or experienced, a substantial majority of respondents indicated that, should they fall victim of crime, they would report it. This discrepancy suggests that experience of crime may play a role in whether one chooses to actually report a crime one has experienced.

Further to expectations about crime, experiences of crime also appear to play a role in shaping perceptions of the police. Lower levels of trust in the police and lower positive perceptions of the police were common amongst those who had experienced crime. It could be the case that the level of satisfaction with the police-citizen encounter affects one's global trust in the police, perceived reliability, and confidence in the police's effectiveness. Consequently, such dissatisfied individuals may be more likely to portray the police negatively. Their experiences may well rub off on the generalised perceptions that others go on to develop vicariously about the police.

In addition to having high expectations of falling victim to crime, respondents also believed that more crime is taking place in the country in general. However, this contrasted with beliefs that this is not the case within one's own local area. In particular, respondents were more likely to believe that crime is increasing elsewhere, rather than in their locale.

Despite the fact that most respondents predicted a high likelihood of falling victim to crime, they were, paradoxically, not too concerned about this. The highest object of concern was directed towards the protection of others and this indeed was complemented by the highest cause of fear of crime, that is, letting children unsupervised in the streets. As for worries about specific crimes, online crime clearly emerged as the most worrisome type of crime. Indeed, it could be the case that common reports of online crime in the media as well as publicity regarding the police's cybersecurity unit may make this type of crime at the forefront of people's attention. Consequently, it is possible that individuals could be more worried about it as a result.

4.2 ATTITUDES TOWARDS THE POLICE AND PERCEPTIONS OF POLICING ACTIVITIES

Overall, the public holds a positive attitude towards the police. Similarly, they also demonstrate a high level of trust, believing that the police are there to protect us. However, perhaps the most interesting findings lie in the perception differences between population groups. Notably, there were clear intergenerational differences in perceptions of the police. On the one hand, younger individuals were more likely to view the police negatively and trust the police less. On the other hand, older individuals who were more likely to view the police positively, trust them more, and were more open to build police-community ties. As suggested by the literature (e.g., Sindall et al., 2016), it could be possible that as younger individuals are relatively more socially active, they may have a higher opportunity to encounter the police, consequently, influencing their perception of the police and making them less open to stronger police-community ties.

Other notable differences emerged between individuals of different educational levels as well as employment status. Particularly, the lower educated an individual is, the more likely they are to perceive the police positively, and the higher their trust in them. This was also the case for individuals who are retired, homemakers, or unemployed. Conversely, the more highly educated respondents were, the more negatively they perceived the police, and

the lower their trust in them. This was also the case for individuals who are students or employed. Literature (see Lloyd & Bahr, 2010) suggests that education may influence how one forms one's attitudes, which in turn may have affected respondents' perceptions and expectations of the police making them somewhat more critical.

Differences between districts were also notably evident, but less categorical. In particular, individuals residing in Gozo and Comino, and the South Eastern districts generally perceived the police negatively, whereas those residing in the Northern Harbour, Southern Harbour, and Western district generally perceive the police positively. Overall, there appears to be a mix of attitudes across the country. Indeed, the role of locality/district/region in shaping public perceptions of the police requires a nuanced investigation. Having said this, the district profiles presented above detail particular inclinations towards the police and policing and provide plenty of insight into how policing services can be tailored to cater for citizen expectations in particular locales. This applies both to police assigned to stations as well as to community police officers.

Gender differences were less pronounced. However, a noteworthy distinction emerged in relation to fear of crime. A well-established finding has been that females are more likely to be afraid of crime than males (e.g., Rader & Haynes, 2011). Importantly, this finding was replicated in the present study: females were indeed more likely to report higher levels of fear of crime and were more concerned about crime. A reason for this could be due to cultural and socialization processes that facilitate gender differences (e.g., Fetchenhauer & Buunk, 2005).

The importance of acknowledging perception differences amongst population groups lies in the need for the police to maintain legitimacy, reduce crime, and protect citizens. Furthermore, working towards improving the public's trust levels and perceptions may in turn help to decrease wrongdoing amongst the public. Successfully managing the public's expectations, therefore, requires a tailored communication strategy targeting specific audiences. This will inevitably result in more effective policing.

4.3 CONCLUSION

In summary this study has investigated the Maltese public's perceptions of crime, the police, and policing activities. Overall, people demonstrate high levels of trust in the police

and generally perceive the police positively. Such perceptions do not appear to be primarily shaped through experience, as most respondents indicated that they had not experienced and/or witnessed a crime recently. Differences in perceptions between population groups were particularly evident across age and employment status, however, they also emerged across genders, districts, and relationship status. Ultimately, the understanding of how perceptions are shaped by certain demographic variables may be instrumental in promoting and facilitating successful policing.

APPENDIX B

Questionnaire

Firstly, may you let me know if you or members of your household have ever served with the police force (including 'Police Community Support Officers' [PCSOs])?

Yes _____ No _____ EXCLUDE 'YES' RESPONDENTS

Demographics

Age (years)

Gender: Man; Woman; Other

City/Village where you reside

Postcode/Name of street

Nationality

Your highest level of education

Primary Secondary Post-Secondary Tertiary

Relationship status

Married Not Married
Seperated/Divorced/Annulled Marriage Widow

Occupation

- Unskilled: like working in fields, catering, house cleaning
- Skilled: like technician, woodworker, hairdresser, tailor
- Office work ('White collar'): like clerk, salesperson, secretary, small business
- Professional: like doctor, lawyer, teacher, business executive
- Currently not working: Unemployed Retired Housewife/husband
- Student

If you are currently without work, what is your work usually?

- Other (specify): _____
- Don't know

Do you identify with a religious organisation? (e.g., Roman Catholic)?

Yes No

IF YES To what extent do you identify with your religion on a scale from 1 (the least identification) to 10 (the higher identification)?

1 2 3 4 5 6 7 8 9 10

Do you suffer from any chronic illness (e.g., diabetes, chronic heart disease, etc.)?

Yes___ No __

In general, how healthy are you? You can say your health is:

1. Very bad 2. Bad 3. Not bad 4. Good 5. Very good

Socio-economic status

Does your family own a telephone/mobile? Yes ___ No ___

Does your family own a washing machine and electric oven? Yes ___ No ___

Does your family own a car, van, or truck? Yes ___ No ___

Does your family own a computer? Yes ___ No ___

Does your family own a ‘Smart TV’? Yes ___ No ___

Does your family own an air-conditioner? Yes ___ No ___

Do you sometimes avoid using your air-conditioner to save money from your electricity bill?
Yes ___ No ___

Wellbeing: Personal and Social

Life Satisfaction

I am going to read some statements regarding how you think about yourself and your life.

Tell me to what extent you agree with each one from a scale from 1 (Totally Disagree) to 5 (Totally Agree):

	Totally disagree	Disagree	Unsure / Neutral	Agree	Totally agree
1. In many ways, my life approximates my ideal.	[]	[]	[]	[]	[]
2. My life conditions are excellent.	[]	[]	[]	[]	[]
3. I am satisfied with my life.	[]	[]	[]	[]	[]
4. So far, I have all the important things I want in life.	[]	[]	[]	[]	[]

- | | | | | | |
|--|-----|-----|-----|-----|-----|
| 5. If I were to relive my life, I would change almost nothing. | [] | [] | [] | [] | [] |
|--|-----|-----|-----|-----|-----|

Psychological Problems

On a scale from 1 to 5, where 1 is 'Never' and 5 is 'All the Time', how often do you experience the following?

	Never	Rarely	Sometime s	Often	All the Time
1. I feel tired.	[]	[]	[]	[]	[]
2. I feel sick in the stomach.	[]	[]	[]	[]	[]
3. I feel dizzy and weak.	[]	[]	[]	[]	[]
4. I feel short of breath even when I am not exercising.	[]	[]	[]	[]	[]
5. I feel weak all over.	[]	[]	[]	[]	[]
6. I feel tense or very excited.	[]	[]	[]	[]	[]
7. I feel nervous and agitated.	[]	[]	[]	[]	[]
8. I feel restless.	[]	[]	[]	[]	[]
9. I feel annoyed and irritable.	[]	[]	[]	[]	[]
10. I feel worried that something is going to happen.	[]	[]	[]	[]	[]

11. I feel unhappy and sad.	[]	[]	[]	[]	[]
12. I feel confused.	[]	[]	[]	[]	[]
13. I am worried most of the time.	[]	[]	[]	[]	[]
14. I feel alone even when I am surrounded by others.	[]	[]	[]	[]	[]
15. I lose interest and pleasure in the things I used to enjoy.	[]	[]	[]	[]	[]

Self Evaluation

On a scale from 1 to 5, where 1 is 'Totally Disagree' and 5 is 'Totally Agree', to what extent do you agree about these statements regarding yourself and your life?

	Totally disagree	Disagree	Unsure / Neutral	Agree	Totally agree
1. All in all, I am satisfied with myself.	[]	[]	[]	[]	[]
2. Sometimes I feel I am good at nothing.	[]	[]	[]	[]	[]
3. I feel I have a number of good qualities.	[]	[]	[]	[]	[]
4. I am capable of doing things as much as others.	[]	[]	[]	[]	[]

- | | | | | | | |
|-----|--|-----|-----|-----|-----|-----|
| 5. | I feel I have what to be proud of. | [] | [] | [] | [] | [] |
| 6. | Sometimes I feel useless. | [] | [] | [] | [] | [] |
| 7. | I feel I am a person of value, at least on an equal level with others. | [] | [] | [] | [] | [] |
| 8. | I do not have enough respect for myself. | [] | [] | [] | [] | [] |
| 9. | Sometimes I think of myself as a failure. | [] | [] | [] | [] | [] |
| 10. | I have a positive attitude toward myself. | [] | [] | [] | [] | [] |

Socio-Cultural Competence

Please, indicate how often you experience difficulty in living in Malta with regards to each of these aspects, on a scale from 1 to 5 where 1 means you have ‘no difficulty’ and 5 means you have ‘extreme difficulty’:

[Use the scale from 1 to 5 if asked

1 = no difficulty 2 = little difficulty 3 = moderate difficulty

4 = great difficulty 5 = extreme difficulty]

1. Making friends	1	2	3	4	5
2. Finding food you like.	1	2	3	4	5
3. Following rules and customs.	1	2	3	4	5
4. Dealing with people in authority.	1	2	3	4	5
5. Using public transport.	1	2	3	4	5
6. Dealing with beuracracy.	1	2	3	4	5
7. Making yourself understood.	1	2	3	4	5
8. Going shopping.	1	2	3	4	5
9. Understanding jokes and humour.	1	2	3	4	5
10. Finding accomodation.	1	2	3	4	5
11. Going to social gatherings.	1	2	3	4	5

12. Communicating with others belonging to a different ethnic group.	1	2	3	4	5
13. Understanding differences in culture and ethnicity	1	2	3	4	5
14. Praying	1	2	3	4	5
15. Establishing a relationship with individuals from the opposite sex	1	2	3	4	5
16. Finding your way around.	1	2	3	4	5
17. Talking about yourself with others.	1	2	3	4	5
18. Dealing with the climate.	1	2	3	4	5
19. Family relations.	1	2	3	4	5
20. The pace of life.	1	2	3	4	5

Social Capital: Contacts

The following are questions about friends and people you know.

a. How many close friends do you have?

	None	Only One	A Few	Quite a lot	A lot
Close friends who are Maltese [read the scale]	[]	[]	[]	[]	[]
Close friends who are foreign [read the scale]	[]	[]	[]	[]	[]

b. How often do you meet with:

	Never	Rarely	Sometimes	Often	Every day
Close friends who are Maltese [read the scale]	[]	[]	[]	[]	[]
Close friends who are foreign [read the scale]	[]	[]	[]	[]	[]

Social Disorganisation – Winstanley et al., 2008

On a scale from 1 to 5 where 1 means you ‘Totally disagree’ and 5 means you ‘Totally agree’, to what extent do you agree with the following statements.

	Totally disagree	Totally agree
There is a lot of criminality in my neighbourhood.		
A lot of selling of drugs happens in my neighbourhood.		
People in my neighbourhood rarely help each other out.		
In my neighbourhood, there is a lot of fighting.		
In my neighbourhood, there are a lot of empty or abandoned buildings.		
People in my neighbourhood rarely visit each other's houses.		
There is a lot of graffiti in my neighbourhood.		
People often move in and out of my neighbourhood.		

Relative Personal Deprivation – Callan et al., 2008

Perceptions of Crime and Security

Perceptions of Security

On a scale of 1 to 5 with 1 being ‘Totally disagree’ and 5 ‘Totally agree’, how much do you agree that:

	Totally disagree					Totally agree				
	1	2	3	4	5	1	2	3	4	5
There is/isn't room for a variety of languages and cultures in this country.										
We need to take steps to protect our cultural traditions from outside influences.										
Learning other languages makes us forget our own cultural traditions.										
I am concerned about the loss of my cultural identity.										
I do not feel culturally secure as Maltese.										
Unemployment in Malta worries me.										

This country does not have enough wealth and prosperity for everyone to feel secure.	1	2	3	4	5
The cost of living here in Malta makes it difficult to have enough money for essential needs.	1	2	3	4	5
People aren't concerned enough about economic matters.	1	2	3	4	5
The possibility of living a secure and peaceful life today is worse than ever before.	1	2	3	4	5
Our society is going from bad to worse.	1	2	3	4	5
Reports about immoral people and people without scruples in our society are realistic	1	2	3	4	5
The probability that people suffer theft, abuse, or even murder is getting higher and higher.	1	2	3	4	5

Socio-Ethnic Thermometers

How favourable is your attitude towards the following ethnic groups on a scale from 0 (cold) to 100 (hot/favourable)?

0 10 20 30 40 50 60 70 80 90 100

Western Europeans (e.g., British, Germans, French, etc.)	
Eastern Europeans (e.g., Romanians, Bulgarians, Serbians, etc.)	
Africans	
Arabs	

Tolerance/Prejudice

On a scale from 1 to 5 where 1 means you Totally Disagree and 5 means you Totally Agree, to what extent do you agree that:

- | | | | | | | |
|-----|--|---|---|---|---|---|
| 1. | It is a bad idea for people of different race/ethnicity to marry each other. | 1 | 2 | 3 | 4 | 5 |
| 2. | Immigrants/ethnicities that live here should not insist where they are not welcome. | 1 | 2 | 3 | 4 | 5 |
| 3. | If an employer wants to only hire people of a certain group, it is their business. | 1 | 2 | 3 | 4 | 5 |
| 4. | I get angry when I hear of immigrants/ethnicities asking for rights like Maltese citizens. | 1 | 2 | 3 | 4 | 5 |
| 5. | Immigrants/ethnicities should not have a say about Malta's future like people who were born and raised here. | 1 | 2 | 3 | 4 | 5 |
| 6. | It is bad to have people from different ethnic groups and race living together in the same country. | 1 | 2 | 3 | 4 | 5 |
| 7. | We should not promote equality between all groups, regardless of racial or ethnic origin. | 1 | 2 | 3 | 4 | 5 |
| 8. | Some people are simply inferior to others. | 1 | 2 | 3 | 4 | 5 |
| 9. | To get ahead in life, it is sometimes necessary to step over others. | 1 | 2 | 3 | 4 | 5 |
| 10. | If people were treated equally, we would have more problems in this country. | 1 | 2 | 3 | 4 | 5 |

11. We shouldn't treat other nationalities in an equal way to Maltese. 1 2 3 4 5

Fear of Crime

During the last 12 months, have you personally been a victim of crime? Yes ___ No ___

IF YES What was the crime? _____

Have you reported this experience to the police? YES _____ NO _____

Do you think that the police treated you justly? YES _____ NO _____

Did the police treat you respectfully? YES _____ NO _____

In general, were you (the victim) satisfied with how the police handled your matter?

YES _____ NO _____

Did the police find or catch whoever did it? YES _____ NO _____

In general, were you (the victim) satisfied with the action the police took?

YES _____ NO _____

Were you asked to give evidence in court regarding this case? YES _____ NO _____

If you think about this incident that we are discussing, have you or other people that live in this house had some kind of contact with the services offered to victims?

YES _____ NO _____

In general, were you (the victim) satisfied with the contact you had with the services offered to victims? YES _____ NO _____

[FOR THE QUESTION ‘During the coming 12 months...’] If it HAPPENS DURING THE COMING 12 MONTHS, how likely are you to report to the police, on a scale from 1 to 5, where 1 is (Highly unlikely) and 5 is (Highly likely)?

1 2 3 4 5

Apart from this incident, have you personally been a victim of another criminal act during the last 12 months?

Yes ___ No ___

IF YES What was the crime? _____

REPEAT THE MEASURES ABOUT THE EXPERIENCE LIKE THE ABOVE QUESTION UNTIL THE REPLY IS NEGATIVE.

During the last 12 months, have you personally witnessed a criminal act happening? Yes ___

No ___

IF YES What was the crime? _____

Did you give a statement to the police? YES _____ NO _____

Were you asked to give evidence in court regarding this crime? YES _____ NO _____

Have you witnessed any other criminal activity during the last 12 months? YES___ No ___

IF YES What was the crime? _____

Did you give a statement to the police? YES _____ NO _____

Were you asked to give evidence in court regarding this crime? YES _____ NO _____

REPEAT UNTIL THE REPLY IS NEGATIVE

If you think about the future, how likely do you think you are to experience a criminal act in the next 12 months (on a scale from 1 to 10, where 1 is ‘highly unlikely’ and 10 is ‘highly likely’)?

1 2 3 4 5 6 7 8 9 10

IF >=5 What type of crime? _____

Cops & Pleysier (2011) – Fear of Crime

On a scale from 1 to 5 (where 1 is ‘totally disagree’ and 5 is ‘totally agree’), to what extent do you agree or disagree with the following statements?

“Nowadays, it is too dangerous to let children on the streets unsupervised”

1 2 3 4 5

“Out of fear that something will happen to me, I don’t risk going out alone at night”

1 2 3 4 5

“At night, you need to be very careful when walking the streets”

1 2 3 4 5

“During the last 10 years, the streets have become less safe”

1 2 3 4 5

“The police are not capable of protecting us from criminals anymore”

1 2 3 4 5

“Out of fear of being attacked, I don’t risk going into certain areas”
