SECTION B

1. Read the following extract well and then answer **ALL** the questions from this section:

Built cultural heritage is defined in the Cultural Heritage Act as: "... immovable objects of artistic, architectural, historical, archaeological ... importance", including landscapes and groups of buildings. The Maltese Islands have an exceptionally rich built cultural heritage, including seven World Heritage Sites and almost 2,500 mainly architectural scheduled sites.

Yet, our high population density and dynamic urban environment continue to pose difficulties for the conservation of our built heritage. If not scheduled, buildings of historical value and archaeology remain threatened by development. In historic areas, overcrowding and tourism-related activity also undermine the appreciation of built cultural heritage.

The Maltese countryside is characterised by karstic rock and typical Mediterranean flora and fauna. It provides the physical backdrop to built cultural heritage, besides recreational and economic activities among other things. It is essential to maintaining quality of life for residents, as well as a quality experience for visitors. The Maltese landscape is also an important element of Malta's national identity.

2. Read the following extract and then answer **ALL** questions from this section:

An expert report (1950) had suggested a policy of economic diversification ... Eventually, Malta's First Development Plan (1959-1964) was launched. ... The main target of the Plan was the establishment of new industries, with both local and foreign investment. The first industrial estate was built at Marsa and companies were offered attractive conditions. The largest enterprise – the Dockyard – was reoriented to commercial shipping and away from military vessels The Second Development Plan (1964-1969) and Third Development Plan (1969-1974) were similarly oriented towards the achievement of economic diversification built on a mainly export-oriented manufacturing sector, with increasing emphasis given to the development of tourism and agriculture.

The Maltese economy is too small to generate a sufficiently viable demand for its products. To be viable, industries in Malta must be able to sell abroad rather than simply locally. This problem is increased because of the absence of ... natural resources. The Maltese economy is therefore locked into an export-oriented direction and must remain competitive in the production of goods and services.
