

**Aimilios Michael**  
Architect  
Department of Architecture  
University of Cyprus

## **Personal Profile**

Aimilios is just 29 years old and already teaches at the University of Cyprus!

He has been very interested in Architecture since a child. When he finished his studies, he had the opportunity to work in a research centre, and decided to continue the research he had started as a student.

## **Research Profile**

The subject of my research has to do with bioclimatic design.

As the word bioclimatic denotes, this kind of designing combines living with the climatic conditions, by implementing new qualitative parameters in the design.

Bioclimatic design attempts to cover the needs of a building in energy directly from the environment without additional energy consumption. It is directly connected with the traditional architecture and is based on architectural values tried and tested all over the world.

## **Other Interests**

Amelios feels that as a break having an afternoon coffee at a nice cafeteria, in a cloistered garden or yard with friends is unbeatable.
