

Reuben Cutajar /Franklyn Borg / Josefa Vella / Jason Demicoli

Product Development, Test and Quality Control Engineers
Cambridge Silicon Radio (CSR)
Cambridge UK

Personal Profile

Franklyn Reuben, Jason, and Josefa (clockwise from top left) are four Maltese engineers (well actually Josefa is Gozitan!!) who work in the same company in the UK.

Reuben and Franklyn are married and have made the journey to the UK with their families. The group are all good friends.

Jason, the youngest recruit was particularly helpful in pointing out some of the difficulties he himself faced in his science studies but also that he overcame them and that so can others too.

Despite these benefits in numbers they all obviously miss their families back home as well as Maltese food and the proximity of friends on our small island.

Research Profile

The company where our four friends work is involved in developing wireless technologies – in particular relating to Bluetooth.

Reuben works as a product development engineer, Josefa works as a test engineer whilst the others work in quality control. Since this filming, Jason has moved back to Malta (as his colleagues joke because he is too addicted to Maltese pastizzi).

They all mentioned the fact that despite a good experience in local (Maltese) industry, working in a bigger country like the UK allowed

them more job opportunities and the possibility to get into development and testing rather than production per se and to move up the ladder and diversify should they so wish.

Other interests.

All these engineers enjoy a number of other hobbies as well as meeting up with other Maltese colleagues in Cambridge for national (Maltese) festivities and barbeques. Franklyn in particular enjoys being the bell ringer at his local parish.
